The definitive source of information on all topics related to investment valuation tools and techniques Valuation is at the heart of any investment decision, whether that decision is buy, sell or hold. But the pricing of many assets has become a more complex task in modern markets, especially after the recent financial crisis. In order to be successful at this endeavor, you must have a firm understanding of the proper valuation techniques. One valuation book stands out as withstanding the test of time among investors and students of financial markets, Aswath Damodaran's Investment Valuation. Now completely revised and updated to reflect changing market conditions, this third edition comprehensively introduces investment professionals and students to the range of valuation models available and how to choose the right model for any given asset valuation scenario. This edition includes valuation techniques for a whole host of real options, start-up firms, unconventional assets, distressed companies and private equity, and real estate. All examples have been updated and new material has been added. Fully revised to incorporate valuation lessons learned from the last five years, from the market crisis and emerging markets to new types of equity investments Includes valuation practices across the life cycle of companies and emphasizes value enhancement measures, such as EVA and CFROI Contains a new chapter on probabilistic valuation techniques such as decision trees and Monte Carlo Simulation Author Aswath Damodaran is regarded as one of the best educators and thinkers on the topic of investment valuation This indispensable guide is a must read for anyone wishing to gain a better understanding of investment valuation and its methods. With it, you can take the insights and advice of a recognized authority on the valuation process and immediately put them to work for you.

A pioneer choreographer in modern American dance, Anna Sokolow has led a bewildering, active international life. Her meticulous biographer Larry Warren once looked up Anna Sokolow in a few reference books and found that she was born in three different years and that her parents were from Poland except when they were in Russia, and found many other inaccuracies. Drawing on material from nearly 100 interviews, Larry Warren has created a fascinating account and assessment of the life and work of Anna Sokolow, whose nomadic career was divided between New York, Mexico, and Israel. Setting her work on more than 70 dance companies, Anna Sokolow not only pioneered the development of a personal approach to movement, which has become part of the language of contemporary dance, but also created such masterpieces as Rooms, dealing with loneliness and alienation, and Dreams, which concerns the inner torment of victims of the Nazi Holocaust.

Companion to Environmental Studies presents a comprehensive and interdisciplinary overview of the key issues, debates, concepts, approaches and questions that together define environmental studies today. The intellectually wide-ranging volume covers approaches in environmental science all the way through to humanistic and post-natural perspectives on the biophysical world. Though many academic disciplines have incorporated studying the environment as part of their curriculum, only in recent years has it become central to the social sciences and humanities rather than mainly the geosciences. 'The environment' is now a keyword in everything from fisheries science to international relations to philosophical ethics to cultural studies. The Companion brings these subject areas, and their distinctive perspectives and contributions, together in one accessible volume. Over 150 short chapters written by leading international experts provide concise, authoritative and easy-to-use summaries of all the major and emerging topics dominating the field, while the seven part introductions situate and provide context for section entries. A gateway to deeper understanding is provided via further reading and links to online resources. Companion to Environmental Studies offers

an essential one-stop reference to university students, academics, policy makers and others keenly interested in 'the environmental question', the answer to which will define the coming century.

There have been many important changes in the participation of women and men in American society over the past quarter-century. Tests play a role in those changes by providing evidence of the diverse achievement and proficiency of women and men. They aid the learning process and reflect inequalities in opportunity to learn and participate. In addition, they provide useful information in considering what alternatives in education and work make most sense for individuals and influence views about groups of students, educational programs, and a wide range of issues. For all of these reasons, it is important that tests assess fairly and reflect accurately the ways young people are and are not achieving as well as desired. The test performance of women and men is a research topic of historical interest and has received much attention in recent years. Because of this increased interest, there is a great deal of new research and data available. The purpose of the study presented in this volume was to review this new information with two objectives in mind: \*to clarify patterns of gender difference and similarity in test performance and related achievements, and \*to see what implications those findings might have for fair assessment and, as a corollary, examine the assessment process as a possible source of gender differences. This study is interested in tests used in education to assess developed knowledge and skill. In order to gain a broader view of gender similarity and difference, the contributors looked at other types of measures and other characteristics of young women and men. Their hope is to contribute to a firmer basis for insuring fairness in tests--an objective which is particularly important as the field moves increasingly to new forms of assessment in which there is less experience.

Prepared by Dale Klooster and Warren Allen, this best-selling, educational, general ledger package introduces students to the world of computerized accounting through a more intuitive, user-friendly system than the commercial software they'll use in the future. In addition, students have access to general ledger files with information based on problems from the textbook and practice sets. This context allows them to see the difference between manual and computerized accounting systems firsthand, while alleviating the stress of an empty screen. Also, the program is enhanced with a problem checker that enables students to determine if their entries are correct and emulates commercial general ledger packages more closely than other educational packages. Problems that can be used with Klooster/Allen are highlighted by an icon. The benefits of using Klooster/Allen are that: -Errors are more easily corrected than in commercial software. -After the course ends, students are prepared to use a variety of commercial products. -Inspector is found on the IRCD, and allows instructors to grade students' work completed in Klooster/Allen's General Ledger software.

To see like a city, rather than seeing like a state, is the key to understanding modern politics. In this book, Magnusson draws from theorists such as Weber, Wirth, Hayek, Jacobs, Sennett, and Foucault to articulate some of the ideas that we need to make sense of the city as a form of political order. Locally and globally, the city exists by virtue of complicated patterns of government and self-government, prompted by proximate diversity. A multiplicity of authorities in different registers is typical. Sovereignty, although often claimed, is infinitely deferred. What emerges by virtue of self-organization is not susceptible to control by any central authority, and so we are impelled to engage politically in a world that does not match our expectations of sovereignty. How then are we are to engage realistically and creatively? We have to begin from where we are if we are to understand the possibilities. Building on traditions of political and urban theory in order to advance a new interpretation of the role of cities/urbanism in contemporary political life, this work will be of great interest to scholars of political theory and urban theory, international relations theory and international relations.

Sustainability Accounting and Integrated Reporting deals with organizations' assessment, articulation and disclosure of their social and environmental impact on various groups in society. There is increasingly an understanding that financial information does not sufficiently discharge organizational accountability to members of society who are demanding an account of the social and environmental impacts of companies' and other organizations' activities. As a result, organizations report ever more social and environmental information, and there are simultaneous movements towards providing the information in an integrated fashion, showing how social and environmental activities influence each other, members of society and the financial aims of the organization. The book Sustainability Accounting and Integrated Reporting provides a broad and comprehensive review of the field, focusing on the interconnection between different elements of these topics, often dealt with in isolation. The book examines the accounting involved in the collection and analysis of data, control processes over the data, how information is reported to external parties, and the assurance of the information being reported. The book thereby provides an overview useful to practitioners (including sustainability managers, consultants, members of the accounting profession, and other assurance providers), academics, and students.

This study rebuts much of the traditional rationale for regulatory restrictions and provides a list of principles of regulation that would serve as a model for global accounting practices.

The earliest phase of philosophy in Europe saw the beginnings of cosmology and rational theology, metaphysics, epistemology, and ethical and political theory. It saw the development of a wide range of radical and challenging ideas: from Thales' claim that magnets have souls and Parmenides' account that there is only one unchanging existent to the development of an atomist theory of the physical world. This general account of the Presocratics introduces the major Greek philosophical thinkers from the sixth to the middle of the fifth century BC. It explores how we might go about reconstructing their views and understanding the motivation and context for their work as well as highlighting the ongoing philosophical interest of their often surprising claims. Separate chapters are devoted to each of the major Presocratic thinkers, including Xenophanes, Heraclitus, Parmenides, Anaxagoras, Empedocles, Leucippus and Democritus, and an introductory chapter sets the scene by describing their intellectual world and the tradition through which their philosophy has been transmitted and interpreted. With a useful chronology and guide to further reading, the book is an ideal introduction for the student and general reader.

Rivals in the Gulf: Yusuf al-Qaradawi, Abdullah Bin Bayyah, and the Qatar-UAE Contest Over the Arab Spring and the Gulf Crisis details the relationships between the Egyptian Shaykh Yusuf al-Qaradawi and the Al Thani royal family in Qatar, and between the Mauritanian Shaykh Abdullah Bin Bayyah and the Al Nahyans, the rulers of Abu Dhabi and senior royal family in the United Arab Emirates. These relationships stretch back decades, to the early 1960s and 1970s respectively. Using this history as a foundation, the book examines the connections between Qaradawi's and Bin Bayyah's rival projects and the development of Qatar's and the UAE's competing state-brands and foreign policies. It raises questions about how to theorize the relationships between the Muslim scholarly-elite (the *ulam*?) and the nation-state. Over the course of the Arab Spring and the Gulf Crisis, Qaradawi and Bin Bayyah shaped the Al Thani's and Al Nahyan's competing ideologies in important ways. Offering new ways for academics to think about Doha and Abu Dhabi as hegemonic centers of Islamic scholarly authority alongside historical centers of learning such

as Cairo, Medina, or Qom, this book will appeal to those with an interest in modern Islamic authority, the ulama, Gulf politics, as well as the Arab Spring and its aftermath.
