The changes following more than two decades of economic reforms and globalization of the Indian economy – at state, corporate sector, and consumer level – raise interesting questions on the ways in which the stakeholders will continue to engage on the world stage, politically, socially and economically. One key feature of global trade over this period has been the growing importance of not only product standards but, importantly, labor, environmental, food safety and social standards. Being essentially a non-tariff barrier,standards have often become critical to market access and essential to sustained competitiveness. This has a clear impact on the manner in which both global and Indian business is conducted now and in the future. It also underlines the need for a new area of enquiry that addresses the following questions: How are the Indian public and private actors – the state, domestic firms, local consumers and society – influencing and being influenced by such standards? Do standards really matter in an overwhelmingly informal production sphere, with consumers deeply segmented on the basis of a highly skewed distribution of income and with the rural population becoming further marginalized? We have limited knowledge about the challenges faced and strategies pursued by these key domestic actors, both public and private. How have they been able to drive these processes and what are their implications for larger concerns with inequalities and the conditions of the poor? How does the omnipresent informality influence compliance, encourage multiple standards and affect the chances of addressing institutional dysfunctionality? What role does regulation play? These are some of the issues dealt with in the book, which has chapters focusing on aspects of specific sectors such as microfinance, pharmaceuticals, automobiles, tea trading, the role of the state and changing consumer influence. We have limited knowledge about the challenges faced and strategies pursued by these key domestic actors, both public and private. How have been they able to drive these processes and what are the consequences of these changes for the Indian economy, other emergent economies and for the rest of the developing world? In particular, what are their implications for the wider Indian society, especially on concerns with informality, inequalities and the conditions of the poor? How does informality in its omnipresent form influence compliance, encourage multiple standards and chances of addressing institutional dysfunctionality? What role does regulation play? These are some of the issues dealt within the book wherein chapters focus on aspects of specific sectors, trading, role of the state and changing influence of the consumer.

"The greater our knowledge increases, the more our ignorance unfolds. " U. S. President John F. Kennedy, speech, Rice University, September 12, 1962 My primary purpose for writing this book was much more than to provide another information source on Chemistry, Manufacturing & Controls (CMC) that would rapidly become out of date. My primary purpose was to provide insight and practical suggestions into a common sense business approach to manage the CMC regulatory compliance requirements for biopharmaceuticals. Such a common sense business approach would need (1) to be applicable for all types of biopharmaceutical products both present and future, (2) to address the needs of a biopharmaceutical manufacturer from the beginning to the end of the clinical development stages and including post market approval, and (3) to be adaptable to the constantly changing CMC regulatory compliance requirements and guidance. Trying to accomplish this task was a humbling experience for this author! In Chapter 1, the CMC regulatory process is explained, the breadth of products included under the umbrella ofbiopharmaceuticals are identified, and the track record for the pharmaceutical and biopharmaceutical industry in meeting CMC regulatory compliance is discussed. In Chapter 2, while there are many CMC commonalities between biopharmaceuticals and chemically-synthesized pharmaceuticals, the significant differences in the way the regulatory agencies handle them are examined and the reasons for why such differences are necessary is discussed. Also, the importance of CMC FDA is stressed.

One of the most common reasons so many new drug, medical device, or equipment applications are rejected each year by the FDA is the failure to properly develop and document plans and procedures. This is required of both U.S. and foreign companies wishing to market their products in the United States. The lack of well defined validation standard operating procedures may result in adverse FDA findings, recalls, and heavy financial losses. Key FDA guidelines on good manufacturing practice (GMP), good laboratory practice (GLP), and validation do not describe exactly how to develop a master validation plan, how to achieve compliance, or the standard operating procedures and documentation required. This text provides the required validation standard operating procedures and documentation necessary for achieving compliance in the pharmaceutical industry. The text and CD are designed to minimize workload and optimize time, money, and resources. A comprehensive when-and-how-to-do-it guide, Validation Standard Operating Procedures provides the needed administrative solutions and guidance for achieving compliance with FDA requirements, and for obtaining authorization to market products in the United States. The CD-ROM contains 74 template validation standard operating procedures that can be tailored to meet the regulatory compliance requirements of any pharmaceutical, diagnostic, medical device, medical equipment, and biotech product. You can edit, print, and customize these procedures to fit your needs. The book and CD work together to minimize the number of documents used and to ensure their accuracy. All critical elements and requirements of validation are covered, so you can easily implement them and avoid the stress that usually accompanies an FDA audit. Features Provides all the information that managers need to establish functions, acceptance criteria, and validation procedures in compliance with FDA guidelines Includes step-by-step directions for translating GMP requirements into action, based on your company's Master Validation Plan and execution protocols Describes how to establish test functions and prevent defects in order to produce products that are fit for use Serves as an ideal companion to Haider's Pharmaceutical Master Validation Plan

The word cleaning covers a wide range of activities from good housekeeping and janitorial duties to clinical process cleaning applications that form part of our everyday lives, most people are not aware of their existence, and yet without them, many of the services and products we take for granted would not be available. Most chapters include case studies of various cleaning problems together with the solutions offered. Emphasis is placed on the practical aspects of designing, manufacturing and operating cleaning equipment, this includes a detailed examination of traditional cleaning methods, and considers a number of lessor known techniques that have been developed over recent years together with a glimpse of the future trends in the industry In

addition to the actual cleaning techniques, the book examines the effect, of increasing international health, safety, training, and environmental legislation together with regulations that control cleaning standards in the pharmaceuticals, cosmetics, food and drinks manufacturing industries. In this respect, the book is not intended to be a definitive reference book. Legislation and regulations are continually being upgraded, particularly those relating to European Directives. No apologies are given for the fact that the reader will be continually reminded of the need to obtain up to date copies of the various documents referred to, and to secure expert advice on those issues that are crucial in terms of health, safety and hazardous conditions. To assist the reader, useful information sources are listed in the reference section following each chapter. jkljk

Unlike much analysis about regulation in Asia which focuses on globalisation and the transplant effect, leaving domestic influence over commercial regulation under-researched and under-theorized, this book focuses on how local actors influence regulatory change. It explores the complex economic and regulatory factors that generate social demand for state regulation and shows how local networks, courts, democratic processes and civil society have a huge influence on regulatory systems. It examines the particular circumstances in a wide range of Asian countries, provides transnational comparisons and comparisons with Western countries, and assesses how far local regulatory regimes increase economic value and convey competitive advantages.

It concentrates on the more recent methods and techniques for separating components and products of the biotechnology industry. Each chapter deals with a specific type or area of application and includes information on the basic principles, industrial equipment available, commercial applications and an overview of current research and development. Main objective of the book is to provide in-depth knowledge of the subject in an interesting and paramount simple way

Within the European Union the manufacturing of medicinal products has undoubtedly reached a very high quality level. The principles of Good Manufacturing Practice (GMP) are required by law. A relevant part of the quality of finished products depends on the quality of the starting material, especially of the active pharmaceutical ingredients (APIs). In the framework of globalisation and due to the ever-increasing cost pressure APIs are meanwhile sourced in a worldwide market, mainly in Asia. The risk of sourcing substandard, contaminated or adulterated products is an existent fact. Therefore, the quality management systems of the pharmaceutical manufacturers need to be adjusted to this challenge.

Many initiatives have been started by authorities and the pharmaceutical industry during the last years in order to avoid the use of Counterfeit APIs or Rogue APIs and unclear supply chains. Indeed, full assessment of GMP compliance of API suppliers represents a cost-intensive and resource-requiring process. Setting reasonable priorities in the audit programme of a pharmaceutical company becomes possible through a risk-based management.
