A first introduction to the natural world that looks at the myriad ways in which plants and animals have adapted to give themselves the best chance of survival. Natural World explores and explains why living things look and behave the way they do in a series of visually compelling information charts.

In his eye-popping work of picture book nonfiction, the Caldecott Honor-winning author-illustrator Steve Jenkins explains how for most animals, eyes are the most important source of information about the world in a biological sense. The simplest eyes—clusters of light-sensitive cells—appeared more than one billion years ago, and provided a big survival advantage to the first creatures that had them. Since then, animals have evolved an amazing variety of eyes, along with often surprising ways to use them.
