before outlining the management of the clinical condition diagnosed. Organised into three sections, the first provides a vital overview, whilst the second focuses on common presentations and diagnoses. Uniquely, this new book shows readers how to turn symptoms into a list of diagnoses ordered by probability - a differential diagnosis. Experienced consultants who teach trainees every day demonstrate how to derive an ordered differential diagnosis, how to narrow this down to a single diagnosis and if not, how to live with diagnostic uncertainty. The final section provides a comprehensive account of the management of system-based syndromes and diseases. Highly-structured chapters emphasize how common conditions present, how to approach a diagnosis, and how to estimate prognosis, treatment and its effectiveness. An onus is placed on the development of crucial diagnostic skills and the ability to devise evidence-based management plans quickly and accurately, making this an ideal text for core medical trainees.

"This book provides teaching scripts for medical educators in internal medicine and coaches them in creating their own teaching scripts. Every year, thousands of attending internists are asked to train the next generation of physicians to master a growing body of knowledge. Formal teaching time has become increasingly limited due to rising clinical workload, medical documentation requirements, duty hour restrictions, and other time pressures. In addition, today's physicians-in-

training expect teaching sessions that deliver focused, evidence-based content that is integrated into clinical workflow. In keeping with both time pressures and trainee expectations, academic internists must be prepared to effectively and efficiently teach important diagnostic and management concepts. A teaching script is a methodical and structured plan that aids in effective teaching. The teaching scripts in this book anticipate learners' misconceptions, highlight a limited number of teaching points, provide evidence to support the teaching points, use strategies to engage the learners, and provide a cognitive scaffold for teaching the topic that the teacher can refine over time. All divisions of internal medicine (e.g. cardiology, rheumatology, and gastroenterology) are covered and a section on undifferentiated symptom-based presentations (e.g. fatigue, fever, and unintentional weight loss) is included. This book provides well-constructed teaching scripts for commonly encountered clinical scenarios, is authored by experienced academic internists and allows the reader to either implement them directly or modify them for their own use. Each teaching script is designed to be taught in 10-15 minutes, but can be easily adjusted by the reader for longer or shorter talks. Teaching Scripts in Internal Medicine is an ideal tool for internal medicine attending physicians and trainees, as well as physician's assistants, nurse practitioners, and all others who teach and learn internal medicine." -- Prové de l'editor. The contents of this book are focused on commonly encountered symptoms, with their differential diagnosis in a concise form, which will lead to a working diagnosis and investigations. The emphasis is on the axiom, 'common diseases present commonly, and its converse, uncommon diseases present uncommonly'. However, pointers to 'red flags', i.e. uncommon manifestations of common diseases should alert the physician of serious diseases not to be missed. No attempt has been made to discuss etiology or pathology of illness, or the complexities of practice management. The frequency with which a disease is encountered by physician will depend upon its prevalence in the region from which their patients are drawn and also their specialty; therefore, regional variations in the incidence of diseases or methodology, or guidelines for investigations and diagnosis are not discussed, which can be accessed from other relevant sources. The book assumes much basic knowledge and the information it contains must be supplemented by further reading. Cover a spectrum of symptoms, with emphasis on practical features of diagnosis, based on recent evidence-based guidelines. The contents of the book are intended for medical students, internists, and house-officers during their daily office or hospital practice, and also to physicians to boost their diagnostic skills during busy practice day, and preparation for 'rounds' and clinical teaching.

It is vitally important for medical students and junior doctors to grasp an understanding of 'real-life medicine'. This innovative book of cases shows how a particular presentation may progress, and the different complications that may arise and emerge over time, which may be missed by the 'snapshot in time' approach taken by many problem-based volumes.
