This book constitutes the refereed conference proceedings of the Fourth International Conference on Big Data Analytics, BDA 2015, held in Hyderabad, India, in December 2015. The 9 revised full papers and 9 invited papers were carefully reviewed and selected from 61 submissions and cover topics on big data: security and privacy; big data in commerce; big data: models and algorithms; and big data in medicine.

"The ideas in his book will help you see the world in a new way." -Bill Clinton "Mark Penn has a keen mind and a fascinating sense of what makes America tick, and you see it on every page of Microtrends." -Bill Gates In 1982, readers discovered Megatrends. In 2000, The Tipping Point entered the lexicon. Now, in Microtrends, one of the most respected and sought-after analysts in the world articulates a new way of understanding how we live. Mark Penn, the man who identified "Soccer Moms" as a crucial constituency in President Clinton's 1996 reelection campaign, is known for his ability to detect relatively small patterns of behavior in our culture-microtrends that are wielding great influence on business, politics, and our personal lives. Only one percent of the public, or three million people, is enough to launch a business or social movement. Relying on some of the best data available, Penn identifies more than 70 microtrends in religion, leisure, politics, and family life that are changing the way we live. Among them: People are retiring but continuing to work. Teens are turning to knitting. Geeks are becoming the most

sociable people around. Women are driving technology. Dads are older than ever and spending more time with their kids than in the past. You have to look at and interpret data to know what's going on, and that conventional wisdom is almost always wrong and outdated. The nation is no longer a melting pot. We are a collection of communities with many individual tastes and lifestyles. Those who recognize these emerging groups will prosper. Penn shows readers how to identify the microtrends that can transform a business enterprise, tip an election, spark a movement, or change your life. In today's world, small groups can have the biggest impact. Provides information on the features and functions of ASP.NET 2.0, covering such topics as Web server controls, working with Master Pages, themes and skins, data binding, working with XML, and caching. Directory of "2805 database in 2509 entries." Science, technology, medicine, business, law, humanities, and social sciences are covered. Entries give such detailed information as data elements, subject matter, and user aids. Name, subject, producer and processor indexes. Practical advice for online shopping and retailing. Based on the book "Shop Online the Lazy Way" by Richard Seltzer, published in 1999 by Macmillan. Business on the Internet changes quickly. New companies appear, and old ones disappear. Many of the companies names and URLs pointed to no longer exist. But the underlying principles and advice discussed in this book remain true. Vol. for 1947 includes "A list of clandestine

periodicals of World War II, by Adrienne Florence Muzzy."

Reader's Digest 1,001 Computer Hints & Tips
An A-to-Z Guide to Making the Most of Your Computer and the Internet
Readers Digest

This text provides students with an introduction to international human resource management. The authors assume no background knowledge of HRM and blend academic theories with numerous practical examples. Case studies from a wide range of geographical regions and cultures are employed, East as well as West.

Even-numbered issues will contain update information; odd-numbered issues will be complete reissues, with all new & revised information fully integrated into the basic Directory. We are releasing the monthly One-Liner GK Digest Capsule for June 2019. The PDF file covers important topics like banking, awards and honours, National, International Events, Appointments, MoUs and Agreements, Index and Ranking, News-India, Indian States and World. This will help you to have a quick review of Current Affairs for the month of June 2019. Month - June 2019 Price - Free

Alphabetically lists and describes Web sites on a variety of topics, including health, culture, business, travel, and education.

From A-Z, this manual has the Web world covered. Easy-to-use, alphabetical format and organized categories make this reference manual a necessity for frequent surfers, featuring the most up-to-date listings with Editor's Choice sidebars and more. CD-ROM makes searching effortless.

An up-to-date collection of tips, tricks, and

techniques for computer users of all levels includes step-by-step, money- and time-saving guidelines for how to get the most out of one's personal computer, covering software, hardware, the Internet, and the Windows operating system.

For more than 40 years, Computerworld has been the leading source of technology news and information for IT influencers worldwide.

Computerworld's award-winning Web site (Computerworld.com), twice-monthly publication, focused conference series and custom research form the hub of the world's largest global IT media network.

This volume provides in-depth coverage of the latest in remote sensing of hydrological extremes: both floods and droughts. The book is divided into two distinct sections – floods and droughts – and offers a variety of techniques for monitoring each. With rapid advances in computer modelling and observing systems, floods and droughts are studied with greater precision today than ever before. Land surface models, especially over the entire Continental United States, can map the hydrological cycle at kilometre and sub-kilometre scales. In the case of smaller areas there is even higher spatial resolution and the only limiting factor is the resolution of input data. In-situ sensors are automated and the data is directly relayed to the world wide web for many hydrological variables such

Download Free Auto Data Digest Online

as precipitation, soil moisture, surface temperature and heat fluxes. In addition, satellite remote sensing has advanced to providing twice a day repeat observations at kilometre to ten-kilometre spatial scales. We are at a critical juncture in the study of hydrological extremes, and the GPM and SMAP missions as well as the MODIS and GRACE sensors give us more tools and data than were ever available before. A global variety of chapter authors provides wide-ranging perspectives and case studies that will make this book an indispensable resource for researchers, engineers, and even emergency management and insurance professionals who study and/or manage hydrological extremes.

We are publishing the Monthly GK Digest for the Month of June 2019, which Includes articles on important current affairs along with the important government schemes and awards and honours. The digest is helpful for upcoming SBI PO and IBPS PO exam. Number of pages - 84 File format - PDF Month - June 2019 Price - Free

No semi-auto shooter should be without the essential tips, techniques and advice featured in this book. One of the newest members of the Gun Digest family of authoritative reference books, The Gun Digest Book of Semi-Auto Pistols contains informative and entertaining articles by some of American premiere semi-auto experts, including Dave Workman, Chris Christian, and Kevin

Michalowski. From target models to personal protection guns, from rimfires to large-bore centerfires, *The Gun Digest Book of Semi-Auto Pistols* contains everything the informed shooter should know when contemplating a purchase: current offerings, chamberings, retail pricing and used-gun values. Also includes a comprehensive manufacturer and resource directory.

Hundreds of the best information sources in print and on the Web at your fingertips!

Data Networking is a capability that allows users to combine separate data bases, telecommunication systems, and specialised computer operations into a single integrated system, so that data communication can be handled as easily as voice messages. Data communications is the problem of getting information from one place to another reliably (secure both from channel disruptions and deliberate interference) while conforming to user requirements. IP (Internet protocol) is the central pillar of the Internet and was designed primarily for internetworking as being a simple protocol almost any network could carry. The business world appears to increasingly revolve around data communications and the Internet and all modern data networks are based around either the Internet or at least around IP (Internet Protocol)-based networks. However, many people still remain baffled by multiprotocol networks - how do all the protocols

fit together? How do I build a network? What sort of problems should I expect? This volume is intended not only for network designers and practitioners, who for too long have been baffled by the complex jargon of data networks, but also for the newcomer - eager to put the plethora of "protocols" into context. After the initial boom the rate of IP development is now beginning to stabilise, making a standard textbook and reference book worthwhile with a longer shelf life. Highly illustrated and written in an accessible style this book is intended to provide a complete foundation textbook and reference of modern IP-based data networking - avoiding explanation of defunct principles that litter other books. Network/IP engineers, Network operators, engineering managers and senior undergraduate students will all find this invaluable.
