Conventional wisdom holds that all nations must repay debt. Regardless of the legitimacy of the regime that signs the contract, a country that fails to honor its obligations damages its reputation. Yet should today's South Africa be responsible for apartheid-era debt? Is it reasonable to tether postwar Iraq with Saddam Hussein's excesses? Rethinking Sovereign Debt is a probing analysis of how sovereign debt continuity--the rule that nations should repay loans even after a major regime change, or else expect consequences--became dominant. Odette Lienau contends that the practice is not essential for functioning capital markets, and demonstrates its reliance on absolutist ideas that have come under fire over the last century. Lienau traces debt continuity from World War I to the present, emphasizing the role of government officials, the World Bank, and private markets in shaping our existing framework. Challenging previous accounts, she argues that Soviet Russia's repudiation of Tsarist debt and Great Britain's 1923 arbitration with Costa Rica hint at the feasibility of selective debt cancellation. Rethinking Sovereign Debt calls on scholars and policymakers to recognize political choice and historical precedent in sovereign debt and reputation, in order to move beyond an impasse when a government is overthrown.

Unevenness and inequalities form a central fact of African economic experiences. This book challenges conventional wisdoms about economic performance and possible policies for economic development in African countries, using the striking variation in economic performance as a starting point. African Economic Development: Evidence, Theory, and Policy highlights not only difference between countries, but also variation within countries. It focuses on issues relating to gender, class, and ethnic identity, such as neo-natal mortality, school dropout, and horticultural and agribusiness exports. Variations in these areas point to opportunities for changing performance, reducing reducing inequalities, learning from other policy experiences, and escaping the ties of structure and the legacies of a colonial past. African Economic Development rejects teleological illusions and Eurocentric prejudice, criticizing a range of orthodox and heterodox economists for their cavalier attitude to evidence. Instead, it shows that seeing the contradictions of capitalism for what they are - fundamental and enduring - may help policy officials protect themselves against the misleading idea that development can be expected to be a smooth, linear process, or that it would be if certain impediments were removed. Drawing on decades of research and policy experience, this book combines careful use of available evidence from a range of African countries with economic insights to make the policy case for specific types of public sector investment.

Why did such highly abstract ideas as truth, knowledge, or justice become so important to us? What was the point of coming to think in these terms? Matthieu Queloz presents a method for answering such questions: pragmatic genealogy. We can make sense of these grand abstractions by identifying their roots in concrete practical concerns.

The overall aim of the book is to introduce students to the typical course followed by a data analysis project in earth sciences. A project usually involves searching relevant literature, reviewing and ranking published books and journal articles, extracting relevant information from the literature in the form of text, data, or graphs, searching and processing the relevant original data using MATLAB, and compiling and presenting the results as posters, abstracts, and oral presentations using graphics design software. The text of this book includes numerous examples on the use of internet resources, on the visualization of data with MATLAB, and on preparing scientific presentations. As with its sister book MATLAB Recipes for Earth Sciences—3rd Edition (2010), which demonstrates the use of statistical and numerical methods on earth science data, this book uses state-of-the-art software packages, including MATLAB and the Adobe Creative Suite, to process and present geoscientific information collected during the course of an earth science project. The book's supplementary electronic material (available online through the publisher's website) includes color versions of all figures, recipes with all the MATLAB commands featured in the book, the example data, exported MATLAB graphics, and screenshots of the most important steps involved in processing the graphics.
