Babson recounts Detroit's odyssey from a bulwark of the "open shop" to the nation's foremost "union town." Through words and pictures, *Working Detroit* documents the events in the city's ongoing struggle to build an industrial society that is both prosperous and humane. Babson begins his account in 1848 when Detroit has just entered the industrial era. He weaves the broader historical realities, such as Red Scare, World War, and economic depression into his account, tracing the ebb and flow of the working class activity and organization in Detroit -- from the rise of the Knights of Labor and the American Federation of Labor in the 19th century, through the Congress of Industrial Organizations and the sitdown strike of the 1930s, to the civil rights and women's movements of the 1960s and 1970s. The book concludes with an examination of the present day crisis facing the labor movement.

'This book provides an excellent overview of more than a decade of transformation in a forest landscape where the interests of local people, extractive industries and globally important biodiversity are in conflict. The

studies assembled here teach us that plans and strategies are fine but, in the real world of the forest frontier, conservation must be based upon negotiation, social learning and an ability to muddle through.' Jeffrey Sayer, senior scientific adviser, Forest Conservation Programme IUCN - International Union for of Nature The devolution of control over the world's forests from national or state and provincial level governments to local control is an ongoing global trend that deeply affects all aspects of forest management, conservation of biodiversity, control over resources, wealth distribution and livelihoods. This powerful new book from leading experts provides an in-depth account of how trends towards increased local governance are shifting control over natural resource management from the state to local societies, and the implications of this control for social justice and the environment. The book is based on ten years of work by a team of researchers in Malinau, Indonesian Borneo, one of the world's richest forest areas. The first part of the book sets the larger context of decentralization's impact on power struggles between the state and society. The authors then cover in detail how the devolution process has occurred in Malinau, the policy context, struggles and conflicts and how Malinau has organized itself. The third part of the book looks at the broader issues of property relations, conflict, local governance and political participation associated with decentralization in Malinau. Importantly,

it draws out the salient points for other international contexts including the important determination that 'local political alliances', especially among ethnic minorities, are taking on greater prominence and creating new opportunities to influence forest policy in the world's richest forests from the ground up. This is top-level research for academics and professionals working on forestry, natural resource management, policy and resource economics worldwide. Published with CIFOR

Mechanical engineering, an engineering discipline borne of the needs of the industrial revolution, is once again asked to do its substantial share in the call for industrial renewal. The general call is urgent as we face profound issues of productivity and competitiveness that require engineering solutions, among others. The Mechanical Engineering Series features graduate texts and research monographs intended to address the need for information in contemporary areas of mechanical engineering. The series is conceived as a comprehensive one that covers a broad range of concentrations important to mechanical engineering graduate education and research.
