Casting Alpha is the story about a platoon of Marine Corps amtrac crewmen who served during the Vietnam War. Kelly, a former trac rat, has wanted to write about his unit since he returned from Vietnam in 1967. He wanted Casting Alpha to be different; not just another blood and guts book about Vietnam. Casting Alpha is the story of young Marines sharing a common goal: getting home in one piece. It's the story of their daily activities and their feelings combined with the sense of helplessness they endured as they carried out their sworn duty. Kelly opened his Vietnam photo album and searched the faces on now faded photographs. Each one transported Kelly back thirty-five years to a time in his life that he refers to as his personal twilight zone. The young faces in the photographs brought back memories, memories of situations and occurrences that seemed to have happened only yesterday. A few memories were of comical situations while others reflect sadness, cruelty, and anger. One memory most trac rats can't forget is the anxiety associated with thoughts of enemy land mines and snipers. Kelly named that anxiety "the big wait." Discover what it was like to be a crewman aboard an amtrac during the Vietnam War. Feel the anxiety build as you climb into the driver's seat, start the engine, and begin a mission into no-man's land on roads and trails that have been previously visited by enemy soldiers. Are land mines in your path? Will your number be up today? The big wait will take control of your senses as you read Casting Alpha.

Most people find colorful brain scans highly compelling—and yet, many experts don't. This discrepancy begs the

question: What can we learn from neuroimaging? Is brain information useful in fields such as psychiatry, law, or education? How do neuroscientists create brain activation maps and why do we admire them? *Casting Light on The Dark Side of Brain Imaging* tackles these questions through a critical and constructive lens—separating fruitful science from misleading neuro-babble. In a breezy writing style accessible to a wide readership, experts from across the brain sciences offer their uncensored thoughts to help advance brain research and debunk the craze for reductionist, headline-grabbing neuroscience. This collection of short, enlightening essays is suitable for anyone interested in brain science, from students to professionals. Together, we take a hard look at the science behind brain imaging and outline why this technique remains promising despite its seldom-discussed shortcomings. Challenges the tendency toward neuro-reductionism Deconstructs hype through a critical yet constructive lens Unveils the nature of brain imaging data Explores emerging brain technologies and future directions Features a non-technical and accessible writing style

Breaking with the traditionally white-centric and politician-, military leader-, business magnate-dominated portrayal of American history, *Still Casting Shadows: A Shared Mosaic of U.S. History* presents a holistic overview of American history, giving equal weight and emphasis to the viewpoints and experiences of Native Americans, African Americans, and other marginalized groups. Rather than simply parading forth facts and figures of what "important" people accomplished or perpetrated, *Still Casting Shadows* delves into what life was like for "average" families in America—from 1620, when the Mayflower landed at Plymouth, Massachusetts, up to the present day. The lives of the individuals portrayed are cast in the context of hundreds of events of national import that occurred in the times and places in which they lived. Among those whose lives are thus illuminated in this broad outline of American history are John Howland and Elizabeth Tilley, passengers on the Mayflower who subsequently married; Capt. John Gorham, a notorious Indian fighter in Colonial New England; Susan Lucky, an Indian woman whose tribe was massacred in northern California; James Shannon, a Civil War sharpshooter who was at Gettysburg and Appomattox; and Theodore Shannon, a California Highway Patrol officer who was awarded that state's Medal of Valor in 1980.

How did European imperialism shape the ideas and practices of religion in East and Southeast Asia? *Casting Faiths* brings together eleven scholars to show how Western law, governance, education and mission shaped the basic understanding of what religion is, and what role it should play in society.

An examination of Eleanor Roosevelt's profound influence on the Democratic party and civil rights organizations cites her repeated challenges to the political parties of the time and the retaliation she faced by those who opposed her. UP.

Engineers rely on Groover because of the book's quantitative and engineering-oriented approach that provides more equations and numerical problem exercises. The fourth edition introduces more modern topics, including new materials, processes and systems. End of chapter problems are also thoroughly revised to make the material more relevant. Several figures have been enhanced to significantly improve the quality of artwork. All of these changes will help engineers better understand the topic and how to apply it in the field.

Providing insights, ideas, and tips for solving real-world fabrication problems, this guide presents a broad range of methods from different welding specialties and a brief understanding of the nonwelding knowledge nearly all welders must have to advance in their trade.

"It's about time that a practicing engineer with casting and academic experience has written a book that provides answers to questions about squeeze casting and semi-solid molding/forming that many engineers and students of casting need answered." —Joseph C. Benedyk, PhD, Consultant and retired technical director, Alcoa High Integrity Die Casting Processes provides a comprehensive look at the concepts behind advanced die casting technologies, including vacuum die casting, squeeze casting, and several variants of semi-solid metalworking. Practical applications for these processes are illustrated in numerous case studies. This single-source reference tool presents the latest material in five sections: Basic concepts of die casting and molten metal flow High integrity die casting processes with case studies Product design considerations Controlling quality and avoiding defects Future advances under development Key coverage includes a survey of liquid metal flow, strategies to overcome the limitations of conventional die casting, and potential defects unique to high integrity die casting processes. Also featured are methods for minimizing porosity, reducing cost by design, practical applied statistical process control techniques, designing for manufacturability, and containment methods for potential processing defects. Several chapters present detailed real-world examples illustrating the broad range of applications possible using high integrity die casting processes. Included with this book is a CD-ROM containing PowerPoint(r) presentations for each chapter. These presentations can be used for training purposes in conjunction with numerous study questions designed to practically apply the content of the book to real-world situations. Selected PowerPoint(r) slides can be used to support engineering proposals, marketing presentations, or customer education seminars. High Integrity Die Casting Processes is a valuable reference for both component producers and component users alike. Process engineers, tool designers, manufacturing engineers, production managers, and machine operators will acquire a better understanding of these advanced die casting processes to optimize manufacturing and improve product quality. Component designers, product engineers, purchasing agents, buyers, supplier quality engineers, and project managers will gain insight into these processes and develop superior products by design.

About the Book: Manufacturing process has become important in the industrial environment to produce products for the service of mankind. The basic need is to provide theoretical and practical knowledge of manufacturing processes to all the engineering students. This book covers most of the syllabus of manufacturing processes for engineering classes prescribed by UPTU. At the end of each chapter, a number of questions have been provided for testing the students understanding about the concept of the subject. The whole text has been organized in 10 chapters. The first chapter

This volume contains the proceedings of the 10th International Conference on Logic Programming and Nonmonotonic Reasoning (LPNMR 2009), held during September 14–18, 2009 in Potsdam, Germany. LPNMR is a forum for exchanging ideas on declarative logic programming, nonmonotonic reasoning and knowledge representation. The aim of the conference is to facilitate interaction between researchers interested in the design and implementation of logic-based programming languages and database systems, and researchers who work in the areas of knowledge representation and nonmonotonic reasoning. LPNMR strives to encompass theoretical and experimental studies that have led or will lead to the construction of practical systems for declarative programming and knowledge representation. The special theme of LPNMR 2009 was “Applications of Logic Programming and Nonmonotonic Reasoning” in general and “Answer Set Programming (ASP)” in particular. LPNMR 2009 aimed at providing a comprehensive survey of the state of the art of ASP/LPNMR applications. The special theme was reflected by dedicating an entire day of the conference to applications. Apart from special sessions devoted to original and significant ASP/LPNMR applications, we solicited contributions providing an overview of existing successful applications of ASP/LPNMR systems. The presentations on applications were accompanied by two panels, one on existing and another on future applications of ASP/LPNMR.

Standing Bear and I met again for the first time in the 1980s. To say he changed my world would be the biggest understatement of my life. He, and his shamanic ways, sent amazing waves through my universe. I wrote *Casting*

Dreams—Crossing Time, my remembering of our story, in 2000. What took so long to release this book? The three of me could explain . . . Janet would tell you I had to finish living it. Dr. Jan would tell you that timing is everything. And Auntie Jan would wax my truth poetically, “Ah, ’twill be midnight rising 2015 when that clock will chime. I can publish this book now because it is our truth, way back when and even then. Bear and I really did and did really cast our dreams and cross our time.

This book offers a comprehensive account of adjuncts in generative grammar, seeking to reconcile the differing ways in which they have been treated in the past by proposing a method of analysis grounded in simplification based on Simplest Merge. The volume provides an up-to-date review of the existing literature on adjuncts and outlines their characteristic properties and the subsequent difficulties in adequately defining and treating them. The book compares previous attempts to account for adjuncts which have tended to use additional mechanisms or syntactic operations as a jumping-off point from which to propose a new way forward for analyzing them grounded in minimalist theory. Adopting an approach in the spirit of the strong minimalist thesis (SMT), Bode suggests an analysis of adjuncts which applies a minimalist approach based on theoretical simplicity, one which does not resort to extra mechanisms in capturing the empirical properties of adjuncts. Offering a comprehensive overview of research on adjuncts and foundational minimalist principles, this book will be of particular interest to graduate students and practicing researchers interested in syntax. This is a professional book about the methods that are used to reach conclusions about the nature and behavior of humans. It argues that the method of specimens is more appropriate than the method of relative frequencies to discover how the human animal, as a species, functions.

"Any actor who is serious about his or her career should read this book" Matthew Stillman, Producer: Casino Royale, Wanted, The Chronicles of Narnia: Prince Caspian. "As a director, casting a movie can be a terrifying process. Put the wrong actor in your project and you're sunk. How do you find the right person? ... if you're working with Nancy Bishop you know you're in good, accomplished hands, whether you're a director or an actor.
