This introductory text on 'digital logic and computer organization' presents a logical treatment of all the fundamental concepts necessary to understand the organization and design of a computer. It is designed to cover the requirements of a first-course in computer organization for undergraduate Computer Science, Electronics, or MCA students. Beginning from first principles, the text guides students through to a stage where they are able to design and build a small computer with available IC chips. Starting with the foundation material on data representation, computer arithmetic and combinatorial and sequential circuit design, the text explains ALU design and includes a discussion on an ALU IC chip. It also discusses Algorithmic State Machine and its representation using a Hardware Description Language before shifting to computer organization. "Making Sense of the Social World, Fourth Edition is an engaging and student-friendly introduction to social research for students who need to understand methodologies and results, but who may never conduct research themselves. It provides a balanced treatment of qualitative and quantitative methods, integrating substantive examples and research techniques throughout. All essential elements of social research methods are covered, including validity, causation, experimental and quasi-experimental design, and techniques of analysis. Additionally, it is written in a less formal style to make concepts more accessible to students, and it includes wide-ranging, practical exercises drawn from every experience to help students get hands-on with the material."--pub. desc.

The authors argue that every company or institution must manage four main processes: strategic positioning, market intelligence, value creation and value generation. Adopting a global approach, the book focuses on value creation and introduces students to the tools of the marketing mix in a process oriented manner. New to this edition: - New coverage of technology applications and developments and B2B marketing - Consistent focus on value creation throughout - More examples to illustrate theory - Enhanced pedagogy including long case studies and exercises in every chapter With its unique approach and international coverage, this book is essential reading for advanced undergraduate and postgraduate students of Marketing Management and will also appeal to MBA and other post-experience students.
