An Australian text designed to address the key area of clinical reasoning in nursing practice. Using a series of authentic scenarios, Clinical Reasoning guides students through the clinical reasoning process while challenging them to think critically about the nursing care they provide. With scenarios adapted from real clinical situations that occurred in healthcare and community settings, this edition continues to address the core principles for the provision of quality care and the prevention of adverse patient outcomes.

Because principles of nursing process are the building blocks for all care models, the nursing process is the first model nurses need to learn to "think like a nurse." This trusted resource provides the practical guidance needed to understand and apply each phase of the nursing process, with an increased emphasis on developing both critical thinking and clinical reasoning skills. With an easy-to-follow and engaging writing style, the author provides strategies, tools, and abundant examples to help nurses develop the skills they need to thrive in today's complex health care setting.

Updated and revised, the second edition of this unique and popular text promotes the critical thinking and professional skills needed to face the challenges of today's rapidly changing health care system. Readers learn both skills and theory in a manner that is practical and easy to read. A completely new chapter provides clinical guidelines for mastering the workplace skills suggested by National Educational Goals 2000. And, a wealth of examples, analogies, case studies, and practice sessions provide readers with a truly interactive experience. These practice scenarios illustrate "real-world" challenges such as communicating bad news, working in teams, managing conflict, and satisfying customers.

This edition identifies and strengthens critical thinking skills in nursing, emphasizing the value of applying systematic reasoning to clarify conflicts experienced by nurses, resolve controversial moral issues, and make sound judgments. It also helps strengthen intellectual and scientific acuity through the use of reason and logic, and examines the use of argument in nursing. Advanced nursing students.

About: To prepare you for real world practice, this book will highlight content areas most relevant to the bedside and why they must be mastered and understood. To help visualize the professional development that is needed as you transition to the responsibilities of the professional nurse, I use the metaphor of building a house; not a static structure, but a unique, vibrant "living" house that is a reflection of how you choose to build and add to it over time. Nursing is a living and vibrant practice that requires your personal involvement and engagement to promote the well-being of those you care for. The components of this "living" home include: Foundation: A house must have a firm and stable foundation. The ethical comportment or the art of nursing is this foundation for every nurse. Caring behaviors, nurse engagement, and professionalism in practice must be present or your nursing practice could be on shaky ground before it even begins! Walls: The applied sciences of nursing: pharmacology, fluid and electrolytes, and anatomy and physiology. I contextualize these sciences to the bedside so the relevance of mastering this content becomes apparent. Roof: Critical thinking and clinical reasoning, which is the thinking that is required by the nurse that completes the house and ties everything together. Skeletons in the closet: Every house has closets and some have a few skeletons in them! Incivility and men in nursing will be explored in detail!
