This series of comprehensive manuals gives the home mechanic an in-depth look at specific areas of auto repair. From the Chrysler Six of 1924 to the front-wheel-drive vehicles of the 70s and 80s to the minivan, Chrysler boasts an impressive list of technological "firsts." But even though the company has catered well to a variety of consumers, it has come to the brink of financial ruin more than once in its seventy-five-year history. How Chrysler has achieved monumental success and then managed colossal failure and sharp recovery is explained in *Riding the Roller Coaster*, a lively, unprecedented look at a major force in the American automobile industry since 1925. Charles Hyde tells the intriguing story behind Chrysler—its products, people, and performance over time—with particular focus on the company's management. He offers a lens through which the reader can view the U.S. auto industry from the perspective of the smallest of the automakers who, along with Ford and General Motors, make up the "Big Three." The book covers Walter P. Chrysler's life and automotive career before 1925, when he founded the Chrysler Corporation, to 1998, when it merged with Daimler-Benz. Chrysler made a late entrance into the industry in 1925 when it emerged from Chalmers and Maxwell, and further grew when it absorbed Dodge Brothers and American Motors Corporation. The author traces this journey, explaining the company's leadership in automotive engineering, its styling successes and failures, its changing management, and its activities from auto racing to defense production to real estate. Throughout, the colorful personalities of its leaders—including Chrysler himself and Lee Iacocca—emerge as strong forces in the company's development, imparting a risk-taking mentality that gave the company its verve.

Amaryllis Fox's riveting memoir tells the story of her ten years in the most elite clandestine ops unit of the CIA, hunting the world's most dangerous terrorists in sixteen countries while falling in love and giving birth to a daughter. Amaryllis Fox was in her last year as an undergraduate at Oxford studying ancient languages and theoretical physics when her writing mentor, Daniel Pearl, was captured and beheaded. Galvanized by this brutality, she applied to a Master's program in conflict and terrorism at Georgetown's School of Foreign Service, where she created an algorithm that predicted, with uncanny certainty, the likelihood of a terrorist cell arising in any village around the world. At 21, she was recruited by the CIA. Her first assignment was reading and analyzing hundreds of classified cables a day from foreign governments and synthesizing them into daily briefs for the President. Her next assignment was at the Iraq desk in the Counterterrorism center. At 22, she was fast-tracked into advanced operations training, sent from Langley to "the Farm," where she lived for six months in a simulated world learning how to use a glock, how to get out of flexicuffs while locked in the trunk of a car, how to withstand torture, and the best ways to commit suicide in case of captivity. At the end of this training she was deployed as a spy under non-official cover--the most difficult and coveted job in the field--as an art dealer specializing in tribal and Indigenous art, and sent to infiltrate terrorist networks in remote areas of the Middle East and Asia. *Life Undercover* is exhilarating, intimate, fiercely intelligent--an impossible-to-put-down record of an extraordinary life, and of Amaryllis Fox's astonishing courage and passion.

First published in 2003. The NATO-led Operation Allied Force was fought in 1999 to stop Serb atrocities against ethnic Albanians in Kosovo. This war, as noted by the distinguished military historian John Keegan, "marked a real turning point . . . and proved that a war can be won by airpower alone." Colonels Haave and Haun have organized firsthand accounts of some of the people who provided that airpower-the members of the 40th Expeditionary Operations Group. Their descriptions-a new wingman's first combat sortie, a support officer's view of a fighter squadron relocation during combat, and a Sandy's leadership in finding and rescuing a downed F-117 pilot-provide the reader with a legitimate insight into an air war at the tactical level and the airpower that helped convince the Serbian president, Slobodan Milosevic, to capitulate.

There have been numerous books published that have dealt with psychological assessment. These books have ranged from the theoretical to the clinical. However, most of the pragmatics involved in the day-to-day activities of the psychological assessor often have been neglected in the press. In light of the above, the primary objective of Psychological Assessment in Clinical Practice is to provide the reader(students and practitioners alike) with the realities of conducting psychological assessment in clinical settings where there is not the availability of a plethora of research assistants and staff. Indeed, most individuals end up being solo practitioners or at best work in settings where they must conduct assessment themselves. This multi-authored book, then, details the specifics as to how this is done.
