In the middle of this century's first decade, "bromance" emerged as a term denoting an emotionally intense bond between straight men. Yet bromance requires an expression of intimacy that always toys with being coded as something other than "straight" male behavior, even as it insists that such intimacy must never be misinterpreted. In Reading the Bromance: Homosocial Relationships in Film and Television, editor Michael DeAngelis has compiled a diverse group of essays that address the rise of this tricky phenomenon and explore the social and cultural functions it serves. Contributors consider selected contemporary film and television texts, as well as the genres that historically inspired them, in order to explore what needs bromance attempts to fulfill in relationships between men—straight or otherwise. Essays analyze films ranging from I Love You, Man to Superbad, Humpday, I Now Pronounce You Chuck and Larry, The Hangover, and the Jackass films, and include studies of representative examples in international cinema such as Y tu mama tambien and

classic and contemporary films of the Bollywood genre. The volume also examines the increasingly prevalent appearance of the bromance phenomenon in television narratives, from the "male bonding" rituals of Friends and Seinfeld to more recent manifestations in House, The Wire, and the MTV reality series Bromance. From historical analysis to discourse analysis, sociological analysis, and queer theory, this volume provides a broad range of methodological and theoretical approaches to the phenomenon in the first booklength study of the bromance genre. Film and television scholars as well as readers interested in pop culture and queer studies will enjoy the insights of Reading the Bromance.

Beginning Android Wearables gives you the skills you need to make effective apps for Android Wear-based smartwatches, fitness bracelets, connected home wearable

controllers, and Google Glass. Delight your users by giving them access to the information they'll need at the tips of their fingers. This new edition updates the older entries and adds 30 new ones: Darren Aronofsky, Emmanuelle Beart, Jerry Bruckheimer, Larry Clark, Jennifer Connelly, Chris Cooper, Sofia Coppola, Alfonso Cuaron, Richard Curtis, Sir Richard Eyre, Sir Michael Gambon, Christopher Guest, Alejandro Gonzalez Inarritu, Spike Jonze, Wong Kar-Wai, Laura Linney, Tobey Maguire, Michael Moore, Samantha Morton, Mike Myers, Christopher Nolan, Dennis Price, Adam Sandler, Kevin Smith, Kiefer Sutherland, Charlize Theron, Larry Wachowski and Andy Wachowski, Lew Wasserman, Naomi Watts, and Ray Winstone. In all, the book includes more than 1300 entries, some of them just a pungent paragraph, some of them several thousand words long. In addition to the new "musts," Thomson has added key figures from film history–lively anatomies of Graham Greene, Eddie Cantor, Pauline Kael, Abbott and Costello, Noël Coward, Hoagy Carmichael, Dorothy Gish, Rin Tin Tin, and more. Here

is a great, rare book, one that encompasses the chaos of art, entertainment, money, vulgarity, and nonsense that we call the movies. Personal, opinionated, funny, daring, provocative, and passionate, it is the one book that every filmmaker and film buff must own. Time Out named it one of the ten best books of the 1990s. Gavin Lambert recognized it as "a work of imagination in its own right." Now better than ever–a masterwork by the man playwright David Hare called "the most stimulating and thoughtful film critic now writing."

"Were they reborn into a modern university, Plato and Aristotle and Leibniz would most suitably take up appointments in the department of computer science." Epistemology has traditionally been the study of human knowledge and rational change of human belief. Android epistemology is the exploration of the space of possible machines and their capacities for knowledge, beliefs, attitudes, desires, and for action in accord with their mental states. From the perspective of android epistemology, artificial intelligence and computational cognitive psychology form a unified endeavor: artificial intelligence explores any possible way of engineering machines with intelligent features, while cognitive psychology focuses on reverse engineering the most intelligent systems we know: us. The editors argue that contemporary android epistemology is the fruition of a long tradition in philosophical theories of knowledge and mind. The sixteen essays by both computer scientists and philosophers collected in this volume include substantial contributions to android epistemology, as well as examinations, defenses, elaborations,

and challenges to the very idea. Contributors: Kalyan Shankar Basu. Margaret Boden. Selmer Bringsjord. Ronald L. Chrisley. Paul Churchland. Cary G. deBessonet. Ken Ford. James Gips. Clark Glymour.
