Although there are many textbooks in the field of educational administration describing various organizational theories, this text is unique in tying organizational theory explicitly and systematically to a well-formulated problem-analysis methodology. It provides particular examples of bureaucratic, political, and leadership theories as well as descriptions of two broader theoretical frameworks: Burrell and Morgan's conceptual matrix and systems thinking. Special features include: * a fully developed methodology for describing and documenting problems in schools; * a systematic method for using different theoretical perspectives to analyze the causes of problems in schools; * carefully formulated questions illustrating how different theoretical frameworks lead policy analysts to look at problems differently and to focus on different types and sources of information concerning their possible causes; * substantial sample papers illustrating the methodology; and * a range of illustrative organizational theories, amply described and succinctly grounded intellectually. This book is directed toward students in organizational theory and problem analysis classes and their professors, as well as to school administrators seeking to examine their problems and policies from perspectives that go beyond personal experience.

This report examines the achievement of a purposeful (non-randomly selected) sample of 104 Hispanic students who attended a San Diego County high school district; 3 groups of students had experienced primary language instruction in Spanish and 1 group was submersed in English in elementary school. Subjects were identified as ELs as they entered kindergarten or first grade before January. Two of the bilingual programs, A and B, provided more support in Spanish than the third, Program C. Measures of achievement utilized include a) high school graduation, b) completion of 1 AVID class, c) completion of 1 year of Algebra I, and d) completion of one advanced placement class. Subjects who had bilingual education outperformed submersion subjects on the measures of high school graduation, completion of one AVID class, and completion of 1 year of Algebra I. A higher rate of subjects who were submersed in English took at least one advanced placement class. Subjects in bilingual Programs A and B showed better results than the other 2 groups on the above three measures. Program B graduates took advanced placement classes at a higher rate than the submersion group. Study limitations include a lack of socioeconomic data for subjects and the fact that most of Program A and B students attended 1 middle school and most of Program C students attended another.

The need to reform secondary-level education to prepare young people for new economic realities has emerged. In an age of constant career changing, cognitive flexibility is a top-priority skill to develop in today's students. This shift requires methodological innovation that enhances children's natural abilities as well as updated, focused teacher education in order to prepare them adequately. Educational Reform and International Baccalaureate in the Asia-Pacific is a collection of innovative research that examines the development and implementation of IB curricula. Highlighting a wide range of topics including critical thinking, student evaluation, and teacher training, this book is ideally designed for educators, curriculum developers, instructional designers, administrative officials, policymakers, researchers, academicians, and students.

How do I structure a journal article?; "Can I use 'I' in a research article?"; "Should I use an active or passive voice?" - Many such questions will be answered in this book, which documents the linguistic devices that authors use to show how they align or distance themselves from arguments and ideas, while maintaining conventions of objectivity. Separately paged appendices accompany some reports.

Educational sociologists have paid relatively little attention to children in middle childhood (ages 6 to 12), whereas developmental psychologists have emphasized factors internal to the child much more than the social contexts in explaining children's development. Children, Schools, and Inequality redresses that imbalance. It examines elementary school outcomes (e.g., test scores, grades, retention rates) in light of the socioeconomic variation in schools and neighborhoods, the organizational patterns across elementary schools, and the ways in which family structure intersects with children's school performance. Adding data from the Baltimore Beginning School Study to information culled from the fields of sociology, child development, and education, this book suggests why the gap between the school achievement of poor children and those who are better off has been so difficult to close. Doris Entwistle, Karl Alexander, and Linda Olson show why the first-grade transition?how children negotiate entry into full-time schooling?is a crucial period. They also show that events over that time have repercussions that echo throughout children's entire school careers. Currently the only study of this life transition to cover a comprehensive sample and to suggest straightforward remedies for urban schools, Children, Schools, and Inequality can inform educators, practitioners, and policymakers, as well as researchers in the sociology of education and child development.

All parents want their child to be happy and successful at school, but few decisions are harder than identifying the right school for your child. The Independent Schools Guide, now in its 17th edition, provides all the guidance and advice needed to make the most informed decisions. The book includes an extensive reference section for over 2,000 schools; details on fee planning, scholarships and bursaries; guidance for overseas parents, including language support and guardianship; and detailed profiles of over 200 schools and colleges. For any parent, guardian or carer who is considering the independent sector, the Guide is the definitive reference source.

It can be a challenge writing in a language that is not your native tongue. Constructing academic essays, dissertations and research articles in this second or foreign language is even more challenging, yet across the globe thousands of academics and students do so, some out of choice, some out of necessity. This book looks at a major issue within the field of English for Academic Purposes (EAP). It focuses on the issues confronting non-native-English-speaking academics, scholars and students, who face increasing pressure to write and publish in English, now widely acknowledged as the academic lingua franca. Questions of identity, access, pedagogy and empowerment naturally arise. This book looks at both student and professional academic writers, using qualitative text analysis, quantitative questionnaire data, corpus investigations and ethnographic approaches to searchingly examine issues central to the EAP field.
