This volume explores the links between the rapidly growing phenomenon of social entrepreneurship (SE) and the international tourism and hospitality industry. This unique industry is particularly ripe for transformation by SE and the book's authors delve deeply into the reasons for this. The book has three parts. The first creates a conceptual and theoretical framework for understanding the uniqueness of SE in the tourism context. The second examines different communities of practice where SE is being applied in tourism. The third is a rich collection of case studies from eight countries where tourism SE is already having an impact. The book's authors address the topic from many different angles, disciplinary backgrounds and geographic areas. Many case study authors are practicing social entrepreneurs who share their successes, challenges and experience with tourism-related projects. The book also proposes a research agenda and educational programmatic changes needed to support tourism SE. As these are developed, tourism SE will bring innovation to destinations, transformation of their economic and social structures, and contribution to a better world. The book has many insights and resources for scholars and practitioners alike to usher in this transformation.

This book takes an original approach to business models and entrepreneurship, resulting from a durable involvement with entrepreneurs and from experiments combining theory and practice. The authors present the generation, remuneration, and sharing business model, which relates to the value generation, its remuneration and the sharing of this remuneration. They also outline the role and the central place of the business model within the entrepreneurial process; the theoretical bases conventions theory, resource based view and stakeholder theory and the construction of the GRS model; the experiments conducted within teaching, practical, and theoretical frameworks; and the contribution of the business model to a theory of entrepreneurship theory. The book explains why the business model can be useful for entrepreneurs and why it is relevant to set it in place during the

entrepreneurial process. Students and researchers who are interested in entrepreneurship will find this an important resource for developing a new business. Management coaches, often interested in the most recent developments of management research, will have no difficulty moving between the theory and practice set out in this book. Finally, curious entrepreneurs will read this study not to seek immediate solutions to a problem but to reflect on the topics addressed here that show that the business model is not just a fashion but is highly useful.

Together with the development of transformative technologies that epitomize globalization, the ongoing movements of people across borders and other socio-economic pressures are creating a fast-changing business environment that is difficult for business to understand, let alone control. Dominant social expectations that immigrants should seek to adopt an assimilationist socialization path towards the host country's mainstream are contradicted by minority ethnic group resilience. There is no evidence that these groups naturally disappear within the cultural and behavioural contexts of their adopted countries. Since ethnic minority consumers cannot be expected to assimilate, then they maintain some significant degree of unique ethnicity related consumer characteristics that convert into threats and opportunities for business. The inherent socialisation process also provides opportunities for ethnic entrepreneurship and for proliferation of ethnic minority business. Following from the extensive examination of scholarly perspectives of ethnic marketing theory, there is an acknowledged and marked divide between theoretical exhortations and what is done in practice, a relative oversight of the implications of mixed embedded markets, and a propinquity to overlook the crucial role played by ethnic entrepreneurship and ethnic networks. Opportunity valuations are difficult to enact due to a lack of intelligence about ethnic markets. Variable sentiment about the future of ethnic marketing links to different predictions on how the drivers of globalization will impact on the acculturation paths of ethnic minorities. Keeping a focus on the ethnic group as the unit of analysis, combining ethnic marketing and ethnic entrepreneurship theories provides intelligence about contemporary ethnic marketing and practice perspectives. The ultimate objective is to reduce the theory-practice divide through the development of a collaborative framework between business and scholars that converts into theory-in-use.

Entrepreneurship can, at times, seem like a veritable jungle where finding one's way can prove to be difficult. This book functions as a map locating the most important issues: those where an acceptable consensus already exists, and those that remain open to discussion. In so doing, we have presented the accounts of distinguished explorers in their own words.

From Heidi Neck, one of the most influential thinkers in entrepreneurship education today, Chris Neck, an award-winning professor, and Emma Murray, business consultant and author, comes this ground-breaking new text. *Entrepreneurship: The Practice and Mindset* catapults students beyond the classroom by helping them develop an entrepreneurial mindset so they can create opportunities and take action in uncertain environments. Based on the world-renowned Babson Entrepreneurship program, this new text emphasizes practice and learning through action. Students learn entrepreneurship by taking small actions and interacting with stakeholders in order to get feedback, experiment, and move ideas forward. Students walk away from this text with

the entrepreneurial mindset, skillset, and toolset that can be applied to startups as well as organizations of all kinds. Whether your students have backgrounds in business, liberal arts, engineering, or the sciences, this text will take them on a transformative journey.

Entrepreneurship has been seen as a phenomenon allowing economic development, job creation, increased productivity and innovation, but many studies do not include the causes of these events. Consequently, the objective of this book is to fill this gap by combining several studies from more practice-oriented perspectives. The various chapters presented here follow several approaches which researchers explore in different contexts and link to specific experiences in entrepreneurship. This book intends to contribute to better understanding of the phenomenon of entrepreneurship and innovation, and to show how these business practices can stimulate economic development in various countries and regions worldwide.

Technology Entrepreneurship and Business Incubation analyzes business incubators worldwide through a series of empirical and theoretical papers. The authors examine the extent to which business incubators are influential in situations such as nurturing young technology firms, increasing success of new firms, and in developing an ecosystem around these successes. Also examined is the relationship between business incubators and their resource providers, including venture capitalist firms and government agencies. Edited by Phillip Phan (Johns Hopkins Carey Business School), Sarfraz Mian (State University of New York at Oswego), and Wadid Lamine (Toulouse Business School), all leading figures in the field, this book provides both a theoretical framework to conceptualise ideas and a practical guide to influence best practices and innovation in business incubators.

This book provides an overview of the theory, practice and context of entrepreneurship and innovation at both the industry and firm level. It provides a foundation of ideas and understandings designed to shape the reader's thinking and behaviour to better appreciate the role of innovation and entrepreneurship in modern economies, and to recognise their own abilities in this regard. The book is aimed at students studying advanced levels of entrepreneurship, innovation and related fields as well as practitioners (for example, managers, business owners). As entrepreneurship and innovation are largely indivisible elements and cannot be adequately understood if studied separately, the book provides the reader with an overview of these elements and how they combine to create new value in the market. This edition is updated with recent international research, including research and examples from Europe, the US, and the Asia-Pacific region.

How do you prepare to start a business in South Africa? Where do you find capital to start your venture? What kind of an entrepreneur will you be? Entrepreneurship: Theory in Practice 3e is a comprehensive text on entrepreneurship which will equip students with the sound theory needed to not only establish a business but also succeed in a new venture. The

book is academically sound, offering theory to students and encouraging them to apply this theory through the use of profiles of entrepreneurs, case studies, examples, and review and application questions. The textbook presents the processes and dynamics of entrepreneurship in South Africa, integrating theory into local circumstances in an accessible way, addressing opportunities and highlighting challenges. The third edition of *Entrepreneurship: Theory in Practice* is suitable for senior undergraduate students studying entrepreneurship at university or university of technology.

As the breadth and empirical diversity of entrepreneurship research have increased rapidly during the last decade, the quest to find a "one-size-fits-all" general theory of entrepreneurship has given way to a growing appreciation for the importance of contexts. This promises to improve both the practical relevance and the theoretical rigor of research in this field. Entrepreneurship means different things to different people at different times and in different places and both its causes and its consequences likewise vary. For example, for some people entrepreneurship can be a glorious path to emancipation, while for others it can represent the yoke tethering them to the burdens of overwork and drudgery. For some communities it can drive renaissance and vibrancy while for others it allows only bare survival. In this book, we assess and attempt to push forward contemporary conceptualizations of contexts that matter for entrepreneurship, pointing in particular to opportunities generating new insights by attending to contexts in novel or underexplored ways. This book shows that the ongoing contextualization of entrepreneurship research should not simply generate a proliferation of unique theories – one for every context – but can instead result in better theory construction, testing and understanding of boundary conditions, thereby leading us to richer and more profound understanding of entrepreneurship across its many forms. *Contextualizing Entrepreneurship Theory* will critically review the current debate and existing literature on contexts and entrepreneurship and use this to synthesize new theoretical and methodological frameworks that point to important directions for future research.

How can management be developed to create the greatest wealth for society as a whole? This is the question Peter Drucker sets out to answer in *Innovation and Entrepreneurship*. A brilliant, mould-breaking attack on management orthodoxy it is one of Drucker's most important books, offering an excellent overview of some of his main ideas. He argues that what defines an entrepreneur is their attitude to change: 'the entrepreneur always searches for change, responds to it and exploits it as an opportunity'. To exploit change, according to Drucker, is to innovate. Stressing the importance of low-tech entrepreneurship, the challenge of balancing technological possibilities with limited resources, and the organisation as a learning organism, he concludes with a vision of an entrepreneurial society where individuals increasingly take responsibility for their own learning and careers. With a new foreword by Joseph Maciariello

This new edition of *Entrepreneurship* includes a new section on technology and the emerging trends of e-commerce, and

a chapter on women and minority entrepreneurs.

**Entrepreneurship: Theory/Process/Practice** focuses on Asia-Pacific entrepreneurial development with an overarching commitment to environmental and sustainable entrepreneurial practice as well as social and ethical responsibility. Its strong theoretical framework is coupled with an emphasis on the experiential, through a wealth of scenarios, case studies, feedback questionnaires and business plans. This edition has an emphasis on lean entrepreneurship and the business model canvas, which promotes experiential practice aligning with the online material.

**Social Entrepreneurship: Theory and Practice** is about the creative ways in which social entrepreneurs solve pressing and insurmountable social problems. Theories of social change are presented to help demystify the 'magic' of making an immense, yet durable and irreversible, social impact. Utilizing case studies drawn from various fields and all over the world, the authors document how social entrepreneurs foster bottom-up change that empowers people and societies. They also review the specific personality traits of social entrepreneurs and introduce the new kind of leadership they represent. This book will be valuable to undergraduate, graduate and postgraduate students, while remaining accessible to non-academic readers thanks to its clear language, illustrative case studies and guidelines on how to become a successful social entrepreneur.

Sport is inherently entrepreneurial, though few formal connections exist in academic literature. **Sports Entrepreneurship: Theory and Practice** fills that void, featuring chapters by notable scholars whose contributions cover both the conceptual and case examples highlighting sports entrepreneurship from a global perspective. The editors have assembled a collection that provides insight into the integration of entrepreneurship and sport, building on often-distinct research from both fields, and exploring the innovation, risk-taking, and proactiveness that connect them. The 13 chapters examine the entrepreneurial nature of sport from numerous perspectives, including marketing, broadcasting, sponsorship, and social entrepreneurship and feature examples of organisations, associations, and sport-related products from the US, Australia, Europe, and India.

**Entrepreneurship Policy: Theory and Practice** is the first book to fully analyze the construction of entrepreneurship policy, a rapidly-evolving area of policy about which little is known. From a study and assessment of the practices of governments in thirteen countries in Europe, North America and the Asia-Pacific, this book fully describes the policy area and shares new tools and methods for better understanding and explaining the why and how of an entrepreneurship policy approach. Unlike other research in the field of entrepreneurship where implications from research findings are used to suggest what policy actions should be taken to increase the level of entrepreneurship in an economy, this study is based on what entrepreneurship policy actions are being taken. This is a unique book in the field which points to the

way forward both for policymakers and for the research community in terms of thinking about entrepreneurship policy and the complex issues surrounding its development.

This groundbreaking textbook differs from its competitors by placing an emphasis both on the core processes and practices of entrepreneurship, as well as demonstrating the impact of complex, local environments in shaping processes of entrepreneurship.

Teaching Entrepreneurship advocates teaching entrepreneurship using a portfolio of practices, including play, empathy, creation, experimentation, and reflection. Together these practices help students develop the competency to think and act entrepreneur

This book explores intra-team interaction in workplace settings devoted to technological breakthroughs and innovative entrepreneurship. The first set of studies to investigate these economically important institutions through the lens of talk-at-work, this book begins by discussing the ethnomethodological traditions of Conversation Analysis and institutional interaction and linking them to innovation and entrepreneurship. The book offers rich and detailed empirical accounts of teams talking new technologies and new ventures into being. By focusing on the observable language of teams in action, the book reveals the situated practices that teams use to enact their work, including the means by which team members verbally grapple with the uncertainties inherent in doing work in uncharted domains. The book presents important findings about the conversational accomplishment of work and demonstrates the value of examining the practices of teams in action. A valuable contribution to studies of talk-in-interaction, as well as entrepreneurship-as-practice, this book can help to bridge the gap between scholarly investigations and the practical experiences of entrepreneurs. The author closes by considering the ways that practice-based studies of entrepreneurial work can improve issues of diversity and inclusion within the entrepreneurial ecosystem. This book is intended to serve as an invaluable sourcebook for scholars and students interested in innovation, entrepreneurship, and organizations as well as those focused on applied Conversation Analysis. The book's insights are presented in a richly detailed manner while remaining accessible to readers who are new to the methodologies and activity contexts.

ENTREPRENEURSHIP: THEORY, PROCESS, PRACTICE, 10e, combines a practical, step-by-step approach with a theoretical foundation to form a basic framework for understanding the theory, processes, and practice of entrepreneurship. Recognized for over 25 years as one of the leading books in the field, the aim of the text is to present the most current thinking in entrepreneurship, as well as to provide learners the opportunity to apply ideas and develop useful entrepreneurial skills. This edition has been updated to include current developments and issues in this explosive field. Aimed primarily at undergraduate students, this highly successful textbook provides the reader with a broad overview of the entrepreneurship phenomenon. It focuses on the emergence, evaluation and organizing of entrepreneurial opportunities in various organizational contexts. This thoroughly revised second edition brings it up to date with the newest trends in the entrepreneurship field and includes four insightful new chapters.

Even though the study of innovation and entrepreneurship is a diverse, multi-disciplinary endeavour, the role of culture is often neglected or under-emphasized. Building on the cultural turn that has swept across the social sciences and humanities over the past couple of decades, *Culture, Innovation and Entrepreneurship* provides cutting-edge theoretical and empirical insights about how culture shapes innovation and entrepreneurship. It features novel contributions that enhance our understanding about a variety of important theoretical issues related to symbolic management, framing, legitimacy, optimal distinctiveness, institutional logics and the dynamics of cultural entrepreneurship in and across organizations. This book also addresses a diverse range of topics such as the design of craft goods, the creation of the Guggenheim museum, entrepreneurial ecosystems, open innovation, crowdfunding, the mafia and grand challenges. The chapters in this volume will be of interest to a diverse array of scholars, from those interested in entrepreneurship and innovation to cultural studies, contemporary social theory, organization studies and management. The chapters in this book were originally published as a special issue of the journal *Innovation: Organization and Management*.

This book aims to meet the needs of education and training in modern techniques of innovation and entrepreneurship, and focuses on the detailed presentation of successful business practices. As today's global economic landscape is changing rapidly, the ability of businesses to introduce new products and services to the market faster than their competitors is perhaps their most distinct competitive advantage. This becomes obvious by the significant market share that the most innovative companies gain while increasing profitability. Extensive research in this field has demonstrated that companies that are constantly innovating normally double their profits compared to others. Moreover, establishing successful practices and policies of innovation management, through which ideas evolve from conception through evaluation to implementation and commercialization, become the basis for economic growth at the firm, industry, national, regional, and global levels. Taking Greece as an example, this volume identifies systemic weaknesses in development of new products, risk capital, patenting, broadband penetration, lifelong training, investment in research on the part of firms, high-tech exports, and employment in medium-high-technology manufacturing that place the country at the bottom of the European Union in economic performance and threaten its potential to achieve sustainable growth. To address these weaknesses in Greece and similar countries around the world, the authors present a comprehensive overview of the principles of innovation and entrepreneurship, with particular respect to their relationships to knowledge, learning, and creativity. Drawing from a strong theoretical foundation, and illustrated through in-depth case studies and examples from both private and public sectors, the authors present a framework for innovation management that integrates research, education,

practical application, and policy. Specific topics include technology transfer, intellectual property rights management, the practice of knowledge management intellectual capital investment, business incubators, and Cooperation Research and Development Agreements (CRADAs).

Female entrepreneurship, and, in particular, the contribution of their ventures to aggregate economic activity has gained increasing attention over recent years in terms of theory, practice and policy. This concise book explores how women fit into the contemporary entrepreneurial discourse by recognizing that gender intersects with, and influences, women's experience of entrepreneurship. The book is novel in that it considers women to be a heterogeneous group and as such acknowledges that ethnicity, culture, class and education will all influence and intersect with female entrepreneurship. As a consequence, it explores issues ranging from theoretical relationships between the constructs of gender and entrepreneurship to more empirical work on how entrepreneurship might act as an empowering change agent for women. In order to address the Euro-US centric assumptions underpinning the influence of gender upon entrepreneurship, a chapter is dedicated to the role of entrepreneurship in empowering Palestine women. This book will be important supplementary reading on entrepreneurship, small business management and women's/gender studies courses - it will prove particularly useful to women moving towards starting their own business as well as postgraduate students researching the topic for the first time.

Higher employment, economic growth and innovation are fundamental objectives of modern economies. One effective means of attaining these goals is the development of successful entrepreneurs, and this book aims to provide a deeper, research-based understanding of the factors influencing successful entrepreneurship. Mirjam van Praag compares and contrasts the economic theory of entrepreneurship with determinants of successful entrepreneurship derived from empirical evidence, in an attempt to discover what makes for an accomplished entrepreneur. The author's state-of-the-art historical, theoretical and empirical research on successful entrepreneurship - all from an explicit economic perspective - comprehensively addresses questions such as: 'What are the factors that influence individuals' decisions to start a business venture as opposed to working as an employee?' and 'What are the individual characteristics that make one successful as an entrepreneur?' thereby supporting or dispelling various existing myths. Individual factors contributing to the success of entrepreneurs that are considered include, amongst others, human capital, financial capital and psychological traits. The importance of such factors for the various phases of entrepreneurship, including start-up, delivery and performance is also measured.

In a world defined by increasing uncertainty and complexity, understanding the concept of Entrepreneurial Orientation (EO) is of critical importance. This volume convenes some of the world's leading experts on EO to provide readers with an overview of the current state of EO research and set a compelling agenda for its future.

ÔThe strength of this book is: It is pitched at a level suitable for students. . . who just want to go out and found their own businesses (or think that they do); it is written in a very friendly, supportive, non-intimidating style in which the authors empathise with the student ð indeed, empathy is an interesting subtheme of some of the things they suggest about the successful

entrepreneur. Æ Mark Casson, University of Reading, UK Æ Entrepreneurship in Theory and Practice is not your typical textbook in entrepreneurship. The authors have taken a very creative look at the seeming contradictions that make up the creation of a new business venture. Their use of current research as well as thought provoking cases to illustrate behaviors such as opportunity recognition make this book one that both professors and would be entrepreneurs should read. Æ Alan L. Carsrud, Ryerson University, Canada This unique textbook on entrepreneurship, aimed primarily at undergraduate students, provides the reader with a broad overview of the entrepreneurship phenomenon. It focuses on the emergence, evaluation and organizing of entrepreneurial opportunities in various organizational contexts. Each chapter kicks off with a real-life international case story by high-profile entrepreneurship scholars, including William B. Gartner, Saras Sarasvathy, Alain Fayolle, Kevin Hindle, Thomas Cooney, Anita Van Gils and Ann Clarke. Theories of entrepreneurship are embedded with tensions and dilemmas, which this book presents as a collection of paradoxes for each theme and chapter. The book challenges the reader to be critical and to take a stand on the many paradoxical situations entrepreneurs encounter on their entrepreneurial journey. The authors present theory and knowledge unique to the paradoxical world of entrepreneurship. Including international cases, student involvement, theory, paradoxes, actions, and exercises, all undergraduate students with or without prior entrepreneurship education can enjoy the many benefits, puzzles, and insights the book has to offer.

The development of entrepreneurial abilities in people with dyslexia is a subject of great interest. It has gained increasing importance in economically difficult times because of its potential for the development of new business opportunities. This book brings together contributions from researchers, educators, and entrepreneurs with dyslexia, investigating this subject from many perspectives. Is there something different in the profile of a person with dyslexia that supports the development of entrepreneurship? This book aims to draw out key themes which can be used in education to motivate, mentor, and create the business leaders of tomorrow. It offers a fundamental text for this area of study with a comprehensive, international examination of its topic. It includes views by new and established international writers and researchers, providing up-to-date perspectives on entrepreneurship, dyslexia, and education. It is accessible to read, to understand, and to learn from, and is suitable for recommended reading for graduate and postgraduate students. The diverse views and perspectives demonstrated in this book make it as relevant as possible for a wide group of readers. It informs study in the fields of business and dyslexia, and will be of interest to educators, researchers, and to anyone interested in the overlap of entrepreneurship and dyslexia.

Examines how the institutional environment affects entrepreneurial organizations, and vice-versa.

The third edition of this creative and successful textbook provides a broad overview of entrepreneurship from a theoretical and practical perspective. Engaging for undergraduates, it embeds theories of entrepreneurship with tensions and dilemmas, presented as paradoxes for each chapter. It offers insights into the entrepreneurial process and challenges readers to assess the paradoxes and pitfalls encountered on an entrepreneurial journey.

In recent years, there has been a growing awareness that innovation plays the key role in the success and the functioning of

organizations. This publication reveals an interdisciplinary dimension, because it addresses the increasing need for sustainable innovation that combines economic, environmental and social elements. Its aim is to present the international exchange of ideas, research results and practical experience in the field broadly understood as innovation, to highlight the importance of innovation management in a competitive, global economy, and to discuss the current problems related to innovation and entrepreneurship. In the economy reliant on innovation of various organizations, cross-sectoral co-operation is of paramount importance. It allows to achieve synergy between entities with diverse resources and competences in generating innovative projects. Originally, analysis of cross-sectoral relations focused on building links between business and science – in particular, the realms of research and development. This is the most obvious system by means of which the economy is fed with innovative concepts and their implementation solutions. Over time, the public sector too has begun to be perceived not only as an entity that creates economic regulations, but also as a real partner in the process of shaping economic development: it provides innovative projects, which are then commercialised in business. Therefore, the role of the public sector is not only to legislate, but also to conduct joint actions with the innovative business sector in order to stimulate local development of innovative projects. This publication will address the so-called triple helix (the most effective process of generating innovation): the system of co-operation between business, science, and government that contributes to the creation of innovative economy.

Providing a critical overview of existing research and demonstrating the importance of a transdisciplinary framework for studies of innovation and entrepreneurship, this book advances a general concept of 'collective entrepreneurship' that emphasises the social and collaborative nature of innovation and entrepreneurship, thus shedding light on processes of innovation and entrepreneurship as active practices of social construction. As such, it will appeal to scholars of economic sociology, political science, economic geography and economists, as well as those with interests in innovation policy.

The Theory of Entrepreneurship examines the interiors of the entrepreneurial value creation process, and offers a new unified and comprehensive theory to afford empirical investigations as well as delineate a broader view of the entrepreneurial contextual milieu.

This innovative book takes seriously the ordinary activities of entrepreneurship and maps out new pathways for scholars to understand the nature, properties, and implications of studying practices for entrepreneurship studies. Entrepreneurship is neither an art nor a science, but a bundle of practices, as Peter Drucker once observed. Curiously however, academic research on entrepreneurship mostly abstracts away from practical activity. In contrast, Entrepreneurship As Practice takes ordinary activities of entrepreneurship seriously by mapping out new pathways for scholars to consider the everyday practices through which entrepreneurship occurs. Each chapter draws on contemporary theories of practice to illuminate the nature, properties, and implications of studying the practices of entrepreneurship. The chapters in this book were originally published as a special issue of the journal Entrepreneurship & Regional Development.
