No other Asian poetic form has so intrigued and beguiled the English-speaking world as

the Japanese haiku. Even before World War I such imagist poets as Ezra Pound, Amy Lowell, and John Gould Fletcher were experimenting with the form. At that time, Pound well described the haiku as "an intellectual and emotional complex in an instant of time." Indeed, it is the haiku's sense of immediacy and its precision that continue to appeal to poets and poetry lovers today. In recent decades there has been an upsurge of interest in the haiku, leading to a number of critical studies of the form, studies that have now culminated in the present book. This insightful work not only considers the haiku itself but also the extremely important yet often ignored renga or linked-verse form, out of which the haiku grew. No deep understanding of the haiku is possible without familiarity with the renga. *One Hundred Frogs* begins with a detailed history and description of the renga and haiku. Many renowned Japanese poets, most notably Basho, are represented in the wealth of translated poetry that illustrates the text. To bring this history up to date, a discussion of modern Japanese and Western haiku is included. Next, the author discusses the craft of translating renga and haiku and explores recent developments in the two forms, offering a representative selection of modern works. To reveal the myriad choices open to translators of renga and haiku, the author provides an in-depth analysis of one of Japan's most famous haiku, Basho's poem about a frog in a pond, and presents a compilation of over one hundred translations and variations of the poem. The book closes with short anthologies of English-language renga and haiku by contemporary Western poets that offer a

tantalizing glimpse of the diversity of expression possible with these two forms. An instructive celebration of the renga and haiku, this volume furnishes a new perspective on the work of some of Japan's outstanding poets of old and lays a foundation for the appreciation of the renga and haiku that are being written today.

Jennifer S. Holland, NYT best-selling author of *Unlikely Friendships* and *Unlikely Loves*. Her latest book is *Unlikely Heroes*. A magnificent record of the global hunt for "lost" frog species. Dr. Robin Moore has a passion for frogs and a fascination with finding new and "lost" species. In 2010, he spearheaded the worldwide "Search for Lost Frogs" campaign, which coordinated the efforts of 33 teams of scientists in 19 countries on five continents in a quest to find 100 species of amphibian not seen in over a decade. *Search of Lost Frogs* is a stunning record of Moore's journey and what he and his team did (or did not) find. The book is overflowing with exquisite close-up photographs by Moore that display the frogs' remarkable coloring and camouflage, and reveal their diminutive size -- many of the frogs are less than 5 cm long, if that. Moore's engaging text tells the story of the expedition, its highs and lows, discoveries and failures, and the campaign's ongoing work. The book's first half covers what frogs do for the health of the planet, the slippery slope of extinction, what is being done to monitor frog populations and find lost species, the Lazarus project (which aims to "revive" lost species) and the author's career-long resolve to find the Mesopotamia Beaked Toad. The second half of the book is about the searches. Moore describes the struggles, victories and dangers as well as the science. He takes readers along as his team trudge through rainforest, climb mountains and

paddle rivers in search of the lost frogs, some not seen for more than a century. He tells a story of perseverance, disappointment, rediscovery, resilience, but ultimately of hope, written with passion and illustrated with superb photographs. And a surprise ending: they found 15 lost frogs. They include: In Ecuador, the Rio Pescado Stubfoot Toad, not seen since 1995 In Haiti, six rediscoveries, including the Ventriloquial Frog and Mozart's Frog, both lost for 20 years In India, the Dehradun Stream Frog, last seen (and only once) in 1985; the Elegant Tree Frog (1937); the Chalazodes Bubble Nest Frog (1874); the Anamalai Dot-Frog (1938) In Democratic Republic of Congo, the Omaniundu Reed Frog (1979) In Ivory Coast, the Mount Nimba Reed Frog (1967). Naturalists, lovers of all things frog, schools and interested general readers will enjoy the stunning photographs, the science and the adventurous stories of discovery.

This scientific masterpiece reveals many aspects of the lives of marsupial frogs and closely allied genera. Native to Central and South America, these amphibians differ from other frogs in that they protect their eggs after oviposition by either adhering them to the female's back or placing them in a specialized dorsal pouch (thus the common name, marsupial frog). During mating, the male typically collects the eggs from the female with his feet—often one at a time and always out of water—fertilizes them, and then tucks them into the female's pouch or

attaches them to her back. In some species these eggs hatch as tadpoles, but most emerge as miniatures of the adults. Even among the tadpoles there is remarkable divergence, with some behaving in the typical manner (feeding and metamorphosing), whereas others forego all feeding until they metamorphose. In *Marsupial Frogs*, William E. Duellman's synthesis of all that is known about the unique family Hemiphractidae is largely based on decades of his own careful laboratory and field study. He reveals the diversity of exotic color patterns and the frogs' geographic distributions by providing more than 200 photographs, illustrations, and maps. This exceptional tome should find its way into the libraries of serious herpetologists, tropical biologists, and developmental biologists. Included in this book are

- A molecular phylogeny of the family Hemiphractidae
- A thorough osteological analysis
- A review of external morphological features
- An overview of the evolution of reproductive modes
- A biogeographic synthesis
- Keys to genera and species
- Diagnosis and thorough description of each species of marsupial frog
- Colored physiographic maps depicting species distributions
