This fully revised text for the European Computer Driving Licence has been updated. It takes students step-by-step through the seven modules of the award, setting tasks and exercises on the way. Get the straight facts on FRBR—and whether it is right for you! In 1998, Functional Requirements for Bibliographic Records (FRBR) was a conceptual model promoted by the International Federation of Library Associations and Institutions (IFLA) as being the recommended new advancement in cataloging. As libraries strive to serve their users better in the coming years, questions remain as to whether FRBR may provide an answer on how to improve cataloging systems. Functional Requirements for Bibliographic Records (FRBR): Hype or Cure-All? explores not only the theoretical issues, such as the concept of “works” and the bibliographic relationships of musical works, but also provides a unique survey of most of the systems that actually implement FRBR such as the AustLit Gateway. This book describes the challenges that accompany implementation of FRBR, and how this abstract approach to cataloging can be a useful, practical tool to help improve library systems. Functional Requirements for Bibliographic Records (FRBR): Hype or Cure-All? clearly explains the concepts, ideas, and practical applications of FRBR. The book is comprised of four major sections. A chronological section explains how FRBR was developed and how it will evolve in the future; a theoretical section reviews how FRBR analyzes different types of library materials; a practical aspects section examines how some systems actually use FRBR; and lastly, a section that explains an alternative to FRBR—the XOBIS project—which shows that other solutions are possible to meet future cataloging challenges. Functional Requirements for Bibliographic Records (FRBR) explores: innovative features, including the “Semantic Web” activities future evolutions in cataloging alternatives to FRBR the history of IFLA Functional Requirements for Bibliographic Records Study an updated description of the entity-relationship model being developed by the Working Group to extend the FRBR model to cover authority data key aspects of the FRBR and FRANAR models that will need to be re-examined the concept of expression the cataloging of hand press materials the AustLit Gateway musical works in the FRBR model the Paradigma Project at the National Library of Norway the FRBR and the performing arts oral traditions and FRBR the design of future systems the European FRBR research initiative FRBRizing OCLC’s WorldCat the IFPA software and application interfaces the Library of Congress’s FRBR Display Tool XOBIS—metadata—the critical bridge between content and sophisticated access Librarians, library science faculty, students, and vendors will find Functional Requirements for Bibliographic Records (FRBR): Hype or Cure-All? an invaluable source of information on both the theoretical and practical aspects of FRBR. Revised for the new specification, this textbook covers all the modules of this qualification. Skills practice helps consolidate learning. Practice material at the end of each module helps prepare students for assessment. A CD-ROM contains answers and recalled text to save time and effort.

New edition of this bestselling, ICS-approved textbook covering all seven modules of the ECDL 5 syllabus. Uses a combination of Microsoft Office 2010 suite of applications with Internet Explorer 8 and Windows Live Mail on the Microsoft Windows 7 operating system platform. Book and work files are also suitable for users of Microsoft Office 2007 suite of applications. Taking a comprehensive yet practical approach, images and screen grabs are used to explain concepts in a step-by-step manner. Clearly defined goals, support exercises and retention exercises are provided throughout the text. WRITTEN FOR: Students taking ECDL 5 modules

This book constitutes the refereed proceedings of the Third European Conference on Research and Advanced Technology for Digital Libraries, ECDL'99, held in Paris, France in September 1999. The 26 revised full papers presented were carefully reviewed and selected from a total of 124 submissions. The book is divided in topical sections on image categorization and access, audio and video in digital libraries, information retrieval, user adaptation, knowledge sharing, cross language issues, case studies, and modelling, accessibility and connectedness.

"The ECDL Advanced" series is about helping people to take full advantage of the broad capabilities of different applications. On completion of the programme, candidates will be certified as experts in the use of these applications.

Learn the basic operations associated with searching and navigating web sites to access information, how to create and send e-mail messages and how to manage personal distribution lists and message folders. The manual comes with its own data files which you can use for practising the relevant exercises. Approved by the ECDL Foundation.

Covers the information students need to pass the Advanced ECDL AM4 Spreadsheets qualification using Microsoft Office 2003.

This book constitutes the refereed proceedings of the 4th International Conference on Autonomic and Trusted Computing, ATC 2007, held in Hong Kong, China in July 2007, co-located with UIC 2007, the 4th International Conference on Ubiquitous Intelligence and Computing. The 55 revised full papers presented together with 1 keynote lecture were carefully reviewed and selected from 223 submissions. The papers are organized in topical sections on cryptography and signatures, autonomic computing and services, secure and trusted computing, autonomic models and architectures, trusted models and systems, intrusion detection, access control, trusted computing and communications, key management, worm detection and data security, secured services and applications, as well as fault-tolerant systems.
