Promotes modern architectural features and designs in apartments around the world, collecting examples of entryways, open-plan living, and outdoor spaces. Pattern recognition basically deals with the recognition of patterns, shapes, objects, things in images. Document image analysis was one of the very first applications of pattern recognition and even of computing. But until the 1980s, research in this field was mainly dealing with text-based documents, including OCR (Optical Character Recognition) and page layout analysis. Only a few people were looking at more specific documents such as music sheet, bank cheques or forms. The community of graphics recognition became visible in the late 1980s. Their specific interest was to recognize high-level objects represented by line drawings and graphics. The specific pattern recognition problems they had to deal with was raster-to-graphics conversion (i.e., recognizing graphical primitives in a cluttered pixel image), text-graphics separation, and symbol recognition. The specific problem of symbol recognition in graphical documents has received a lot of attention. The symbols to be recognized can be musical notation, electrical symbols, architectural objects, pictograms in maps, etc. At first glance, the symbol recognition problems seems to be very similar to that of character recognition; - ter all, characters are basically a subset of symbols. Therefore, the large know-how in OCR has been extensively used in graphical symbol recognition: starting with segmenting the document to extract the symbols, extracting features from the symbols, and then recognizing them through classification or matching, with respect to a training/learning set.

Moral Ground brings together the testimony of over eighty visionaries—theologians and religious leaders, scientists, elected officials, business leaders, naturalists, activists, and writers—to present a diverse and compelling call to honor our individual and collective moral responsibility to our planet. In the face of environmental degradation and global climate change, scientific knowledge alone does not tell us what we ought to do. The missing premise of the argument and much-needed center piece in the debate to date has been the need for ethical values, moral guidance, and principled reasons for doing the right thing for our planet, its animals, its plants, and its people. Contributors from throughout the world (including North America, Africa, Australia, Asia, and Europe) bring forth a rich variety of heritages and perspectives. Their contributions take many forms, illustrating the rich variety of ways we express our moral beliefs in letters, poems, economic analyses, proclamations, essays, and stories. In the end, their voices affirm why we must move beyond a scientific study and response to embrace an ongoing model of repair and sustainability. These writings demonstrate that scientific analysis and moral conviction can work successfully side-by-side. This is a book that can speak to anyone, regardless of his or her worldview, and that also includes a section devoted to “what next” thinking that helps the reader put the words and ideas into action in their personal lives. Thanks to generous support from numerous landmark organizations, such as the Kendeda Fund and Germeshausen Foundation, the book is just the starting point for a national, and international, discussion that will be carried out in a variety of ways, from online debate to “town hall” meetings, from essay competitions for youth to sermons

from pulpits in all denominations. The “Moral Ground movement” will result in a newly discovered, or rediscovered, commitment on a personal and community level to consensus about our ethical obligation to the future.
