Our workbook enables students to master skills they previously could not. We recognize that the conventional approach to learning fractions is a failure. Assigning problems and providing problem-specific solutions at the end of a workbook does not help students master the broader concepts. We solve this problem with our specially designed step-by-step approach that teaches the reasoning and critical thinking instead of merely asking students to memorize math facts. Students are also taught through research-based strategies and tasks in a way middle school students can understand and consequently, make sense of fractions. Students who struggle with high school algebra usually have lower standardized test scores because fractions are a fundamental part of middle and high school standardized testing. Now, your student can unleash his fullest math-learning potential - all on his own schedule!
