This book brings together leading experts to assess how and whether the Nazis were successful in fostering collaboration to secure the resources they required during World War II. These studies of the occupation regimes in Norway and Western Europe reveal that the Nazis developed highly sophisticated instruments of exploitation beyond oppression and looting. The authors highlight that in comparison to the heavy manufacturing industries of Western Europe, Norway could provide many raw materials that the German war machine desperately needed, such as aluminium, nickel, molybdenum and fish. These chapters demonstrate that the Nazis provided incentives to foster economic collaboration, hoping that these would make every mine, factory and smelter produce at its highest level of capacity. All readers will learn about the unique part of Norwegian economic collaboration during this period and discover the rich context of economic collaboration across Europe during World War II.

"During their professional lives as doctors, medical students will regularly encounter ethical problems for which there is no clear-cut solution. The high profile given to malpractice cases in the press and the increasing disinclination of patients to accept a paternalistic approach from doctors mean that it is now more essential than ever for medical students to learn to cope with ethical issues early in their careers." "This book aims to help the reader steer a path through the often conflicting demands of personal belief, law, professional guidelines, ethical theories and common sense. Practical case histories involving issues such as euthanasia, abortion and informed consent bring the subject to life." "Ideal for medical students, it will also be useful to students of nursing and other professions allied to medicine."--BOOK JACKET.

Dr. Poncelet and Dr. Hirsh eagerly developed an encyclopedic chapter for the 4th edition of the Guidebook for Clerkship Directors, and it seemed logical and proper to grow that chapter, which had been truncated for the Guidebook, into this book. They have assembled the leading international experts in the field of the medical school longitudinal integrated curriculum, who in turn have generated what we are sure will be considered the ultimate resource for these experiences. This book fills a significant void in the medical education literature.

The traditional definition of development ethics considers the 'ethical and value questions posed by development theory, planning and practice' (Goulet 1977: 5). The field parallels the traditional question of ethics 'How ought one to live as an individual?' by asking in addition 'How ought a society exist and move into the future?' This interdisciplinary field is well represented by a substantial collection of previously-published articles and papers. The volume illustrates a wide range of academic and practitioner writings on the theories and concepts of development ethics as well as ethical development policy and practice.
