

Mokopane Hospital Vacancies

Essential reading for all studying horticulture and keen gardeners. This clear introduction to the principles underlying the practical applications of horticulture opens up the excitement of growing plants and garden development without readers wading through complex information. Written by a team of highly motivated and experienced horticultural tutors, the text supports the newly restructured RHS Level 2 qualifications with related Level 3 topics in boxes and signposting to Level 4 topics, together with other horticultural qualifications at these levels. Full colour images tied closely to the text and practical case study boxes inspire readers by making topics relevant to their own horticultural experiences. A comprehensive glossary helps build confidence in the use of classical horticulture language as well as new developing terms, and end-of-chapter questions encourage readers to apply what they have learnt. Extensive online supporting material includes mind maps showing the relationship of topics and aiding students in revision.

CD-ROM contains full text of print volumes and expanded name index.

WHO's Global Tuberculosis Report provides a comprehensive and up-to-date assessment of the TB epidemic and of progress in care and prevention at global, regional and country levels. This is done in the context of recommended global TB strategies and associated targets, and broader development goals. For the period 2016-2035, these are WHO's End TB Strategy and the United Nations' (UN) Sustainable Development Goals (SDGs), which share a common aim: to end the global TB epidemic. The main data sources for the report are annual rounds of global TB data collection implemented by WHO's Global TB Program since 1995 and databases maintained by other WHO departments, UNAIDS and the World Bank. In WHO's 2017 round of global TB data collection, 201 countries and territories that account for over 99% of the world's population and TB cases reported data.

Public Interest Litigation in South Africa offers grounded accounts - by leaders in the field - of the campaigns, cases, and causes that have defined key areas of public interest litigation in the country since the constitutional transition. The authors share their perspectives on the struggles led by people, communities, activists, and civil society organisations to realise the vision of the Constitution. The book shares the legal narratives of those particular struggles in the hope that this will contribute to the broader continuous struggle for social justice. Part One of the book considers the history of public interest litigation, the public interest sector today, public interest litigation in the context of international law, the ethics and politics of public interest litigation, and procedure. Part Two addresses public interest litigation in key areas of law: property rights, gender, basic services, health care, LGBTI equality, children's rights, basic education, freedom of expression, access to information, and prisoners' rights. Public Interest Litigation in South Africa seeks to share more of the stories of what has been achieved in the courts, beyond the well-trodden, landmark appellate decisions, as a contribution to informed and critical engagement.

Never-before-published recipes from the legendary Ladurée tea room.

This volume is the first-ever complete treatise on polymyxins and presents the most comprehensive and up-to-date reviews of all major research and clinical topics from chemistry, microbiology, pharmacology, clinical use, to drug discovery. All chapters were written by internationally leading researchers and clinicians in the field. It is our wish that readers discover the importance of polymyxin structure in relation to the mechanisms of activity, resistance and toxicity. We emphasized that reliable analytic methods for polymyxins are critical when investigating their pharmacokinetics (PK) and pharmacodynamics (PD). The complicated dose definitions and different pharmacopoeial standards have already compromised the safe use of polymyxins in patients. Therefore, informed by the latest pharmacological information, scientifically-based dosing recommendations have been proposed for intravenous polymyxins. Considering the PK/PD limitations and potential development of resistance, polymyxin combinations are encouraged; however, the current literature has not shown definite microbiological benefits, possibly because most clinical studies to date overlooked key PK/PD principles. Nephrotoxicity is the major dose-limiting factor and it is imperative to elucidate the mechanisms and develop novel approaches to minimize polymyxin-associated toxicities. In addition, the anti-endotoxin effect of polymyxins supports their clinical use to treat Gram-negative sepsis. Fortunately, the discovery of new-generation polymyxins with wider therapeutic windows has benefited from the latest achievements in polymyxin research. This book provides extensive pharmacological information on polymyxins to infectious diseases clinicians, pharmacists, clinical microbiologists, antimicrobial pharmacologists, and pharmaceutical scientists, and is an essential read for those who aim to develop novel polymyxins and improve their clinical use as a last-line defense against Gram-negative 'superbugs'.

Why do you want this job? Why should I hire you? Why do you want to leave your current job? Do you have convincing answers ready for these important questions? Landing a good job is a competitive process and often the final decision is based on your performance at the interview. By following the advice of prominent career planning and human resources expert Peter Veruki, you'll know you have the right answers at your job interview.

Over the last 30 years, a fascinating variety of new place names have been given in South Africa.

The second edition of the APIC Text of Infection Control and Epidemiology is comprised of 121 completely revised chapters. Each chapter includes an abstract, a list of key concepts, a background section, and in-depth discussion of the basic principles and core knowledge on the topic. The chapters also spotlight future trends and research and offer supplemental resources for those who seek further information on the topic. The APIC Text is published in two volumes. Volume 1 of the forthcoming edition covers the 27 chapters that provide the Essential Elements of the theory and practice of infection control. Volume 2, titled Scientific and Practice Elements, includes about 100 chapters.

This edition of the highly acclaimed Management and Leadership for Nurse Managers offers theoretical and practical perspectives on the major management functions as they are practiced in today's organizations. The author introduces current and future nurse managers to the challenges of planning, organizing, leading, and controlling. The most recent research on management theory is incorporated throughout the book in the context of its practical application. New coverage includes total quality management, pay-for-performance, the rising temporary workforce, and downsizing.

The objective of this standard is to provide a framework of principles for directors to use when evaluating, directing and monitoring the information and communication technology (ICT)

portfolio for their organisations. This standard for the corporate governance of ICT is aligned with the set of standards headed by AS 8000-2003.

Brings social, economic and political elements to the policy discussion as well as strategic interventions regarding the fight against "trafficking" (the recruitment and transportation of human beings through deception and coercion for the purposes of exploitation). Trafficking, generally, occurs from poorer to more prosperous countries and regions; however, it is not necessarily the poorest regions or communities which are most vulnerable to trafficking, and so this volume seeks to identify the factors which explain where and why vulnerability increases.--Publisher description.

The book that inspired the major new motion picture Mandela: Long Walk to Freedom. Nelson Mandela is one of the great moral and political leaders of our time: an international hero whose lifelong dedication to the fight against racial oppression in South Africa won him the Nobel Peace Prize and the presidency of his country. Since his triumphant release in 1990 from more than a quarter-century of imprisonment, Mandela has been at the center of the most compelling and inspiring political drama in the world. As president of the African National Congress and head of South Africa's antiapartheid movement, he was instrumental in moving the nation toward multiracial government and majority rule. He is revered everywhere as a vital force in the fight for human rights and racial equality. LONG WALK TO FREEDOM is his moving and exhilarating autobiography, destined to take its place among the finest memoirs of history's greatest figures. Here for the first time, Nelson Rolihlahla Mandela tells the extraordinary story of his life--an epic of struggle, setback, renewed hope, and ultimate triumph.

Kids will relate to Elizabeth's fervent wish to be called by her proper name.

Adam Habib, the most prominent and outspoken university official through the recent student protests, takes a characteristically frank view of the past three years on South Africa's campuses in this new book. Habib charts the progress of the student protests that erupted on Wits University campus in late 2015 and raged for the better part of three years, drawing on his own intimate involvement and negotiation with the students, and also records university management and government responses to the events. He critically examines the student movement and individual student leaders who emerged under the banners #feesmustfall and #Rhodesmustfall, and debates how to achieve truly progressive social change in South Africa, on our campuses and off. This book is both an attempt at a historical account and a thoughtful reflection on the issues the protests kicked up, from the perspective not only of a high-ranking member of university management, but also Habib as political scientist with a background as an activist during the struggle against apartheid. Habib moves between reflecting on the events of the last three years on university campuses, and reimagining the future of South African higher education. This book is a revised and enlarged edition of "The Primary Health Worker," a standard teaching text and reference manual developed for community health workers and their trainers and supervisors. The new edition has been updated with practical knowledge gained during the extensive field use of the previous work. The book also incorporates new information acquired in programs sponsored by the World Health Organization (WHO) for immunization and control of diarrheal disease. The most extensive part of the book is a working guide set out in 52 training and reference units. These have been selected as representing areas where community health workers can make a significant contribution toward the solution of problems in developing countries. Chapters include knowing your community, promoting a healthy environment, keeping the family healthy, health care of women and children, treating sick people, and getting the work done. The new edition also features more advice on ways to prevent diseases and secure community support, as well as on what to do when confronted with health problems, sanitation, or accidents. Also included are precise instructions for the correct performance of such basic procedures as the disinfection of drinking water, the building of latrines, injections, and the use of mouth-to-mouth resuscitation. The remaining sections present guidelines for the trainers of community health workers and for the preparation of local editions or adaptations of this book. (KC)
