

Moving Health Sovereignty In Africa Disease Governance Climate Change Global Environmental Governance Hardcover 2014 By John J Kirtoneditor

The book presents and discusses policy-relevant research on the current debt challenges which developing, emerging market and developed countries face. Its value added lies in the integrated approach of drawing on theoretical research and evidence from practitioners' experience in developing and emerging market countries.

This new Handbook presents an overview of cutting-edge research in the growing field of global health security. Over the past decade, the study of global health and its interconnection with security has become a prominent and rapidly growing field of research. Ongoing debates question whether health and security should be linked; which (if any) health issues should be treated as security threats; what should be done to address health security threats; and the positive and negative consequences of 'securitizing' health. In academic and policy terms, the health security field is a timely and dynamic one and this handbook will be the first work comprehensively to address this agenda. Bringing together the leading experts and commentators on health security issues from across the world, the volume comprises original and cutting-edge essays addressing the key issues in the field and also highlighting currently neglected avenues for future research. The book intends to provide an accessible yet sophisticated introduction to the key topics and debates and is organised into four key parts: Health Securities: the fundamental conceptual issues, historical links between health and security and the various ways of conceptualising health as a security issue Threats: those health issues which have been most frequently discussed in security terms Responses: the wide range of contemporary security-driven responses to health threats Controversies: the securitization of health, its impact on rights and justice and the potential distortion of the global health agenda This book will be of great interest to students of global health security, public health, critical security studies, and International Relations in general.

Global health campaigns, development aid programs, and disaster relief groups have been criticized for falling into colonialist patterns, running roughshod over the local structure and authority of the countries in which they work. Far from powerless, however, African states play complex roles in health policy design and implementation. In *Africa and Global Health Governance*, Amy S. Patterson focuses on AIDS, the 2014–2015 Ebola outbreak, and noncommunicable diseases to demonstrate why and how African states accept, challenge, or remain ambivalent toward global health policies, structures, and norms. Employing in-depth analysis of media reports and global health data, Patterson also relies on interviews and focus-group discussions to give voice to the various agents operating within African health care systems, including donor representatives, state officials, NGOs, community-based groups, health activists, and patients. Showing the variety within broader patterns, this clearly written book demonstrates that Africa's role in global health governance is dynamic and not without agency. Patterson shows how, for example, African leaders engage with international groups, attempting to maintain their own leadership while securing the aid their people need. Her findings will benefit health and development practitioners, scholars, and students of global health governance and African politics. Millions of children are on the move, both within and between countries, with or without their parents. The conditions under which movement takes place are often treacherous, putting migrant children, especially unaccompanied and separated children, at an increased risk of economic or sexual exploitation, abuse, neglect and violence. Policy responses to protect and support these migrant children are often fragmented and inconsistent and while children on the move have become a recognised part of today's global and mixed migration flows they are still largely invisible in debates on both child protection and migration.

Moving Health Sovereignty in Africa Disease, Governance, Climate Change Routledge

"This guide lists the numerous examples of government documents, manuscripts, books, photographs, recordings and films in the collections of the Library of Congress which examine African-American life. Works by and about African-Americans on the topics of slavery, music, art, literature, the military, sports, civil rights and other pertinent subjects are discussed"--

This book constitutes volume one of a two volume examination of development community land issues in Southern Africa. In this volume, Ben Chigara undertakes a holistic inter-disciplinary evaluation of the legitimacy of colonial and emergent post-colonial rule property rights in affected States of the Southern African Development Community (SADC). It particularly focuses on intensifying litigation in national courts, the SADC Tribunal, and more recently the Washington based International Centre for the Settlement of Investment Disputes (ICSID) regarding counter claims to title to property. The book examines cultural, economic and political drivers at the core of SADC land issues, focusing on their significance and potential to contribute to the discovery of a new, sustainable land relations policy that guarantees social justice in the distribution of all the advantages and disadvantages relating to the allocation and use of land. Chigara shows that persistent systematic administrative failures by pre-colonial, colonial and post-colonial authorities have made for a very complex challenge that requires Solomonic tools that neither the Courts alone, nor human rights centric morality alone could resolutely attend. The book recommends a sophisticated systematic new approach to SADC land issues, which is developed in volume two, *Re-conceiving Property Rights in the New Millennium*. This book will be of great interest to students and researchers of Property and Conveyancing Law, Human Rights Law and Land Law.

Ten years in public health 2007-2017 chronicles the evolution of global public health over the decade that Margaret Chan served as Director-General at the World Health Organization. This series of chapters evaluates successes setbacks and enduring challenges during the decade. They show what needs to be done when progress stalls or new threats emerge. The chapters show how WHO technical leadership can get multiple partners working together in tandem under coherent strategies. The importance of country leadership and community engagement is stressed repeatedly throughout the chapters. Together we have made tremendous progress. Health and life expectancy have improved nearly everywhere.

Millions of lives have been saved. The number of people dying from malaria and HIV has been cut in half. WHO efforts to stop TB saved 49 million lives since the start of this century. In 2015 the number of child deaths dropped below 6 million for the first time a 50% decrease in annual deaths since 1990. Every day 19 000 fewer children die. We are able to count these numbers because of the culture of measurement and accountability instilled in WHO. These chapters tell a powerful story of global challenges and how they have been overcome. In a world facing considerable uncertainty international health development is a unifying – and uplifting – force for the good of humanity.

Multi-institutional governance architectures are increasingly common in world politics, yet how do they evolve over time? This book develops a fresh conceptual approach by distinguishing two main types of institutional change and by proposing the strategic context within which governments make decisions regarding international cooperation as the main driving factor. Applying this theoretical framework to the case of genetic resources, it shows how the scope for change has persistently been circumscribed by asymmetries in the global biotechnology sector. Taking a broad view of the underlying technological, legal and economic factors, the book analyzes the formation of international regimes linking access to genetic resources to the fair and equitable sharing of the benefits arising out of their utilization. Covering negotiations in the areas of seeds, intellectual property rights, pandemic influenza viruses and marine genetic resources, the author shows how governments have persistently faced the problem of ensuring cooperation among actors with widely differing interests. This led them to opt for a strategy of institutional layering, whereby new international instruments are gradually built upon pre-existing ones. In addition to giving a comprehensive overview of the international governance of Access and Benefit-sharing within the wider context of modern biotechnology, the argument developed here enables a new perspective for studying institutional change in multi-institutional governance architectures.

The global movement toward democracy, spurred in part by the ending of the cold war, has created opportunities for democratization not only in Europe and the former Soviet Union, but also in Africa. This book is based on workshops held in Benin, Ethiopia, and Namibia to better understand the dynamics of contemporary democratic movements in Africa. Key issues in the democratization process range from its institutional and political requirements to specific problems such as ethnic conflict, corruption, and role of donors in promoting democracy. By focusing on the opinion and views of African intellectuals, academics, writers, and political activists and observers, the book provides a unique perspective regarding the dynamics and problems of democratization in Africa.

If the growing demand for global governance breathed new life into the established G7/8 and the more recent G20, it raised questions about the evolving and optimal relationship between them. One answer arose from the G20's third summit, when it proclaimed the G20 would govern global finance and economics, while the old G8 would focus on development and security. Yet this rough division of labour did not address which issues lay within each category and how interconnections would be addressed to create comprehensive, coherent global governance for a complex world. This volume considers these questions. It explores the summits' performance, the division of labour during their coexistence, their comparative strengths and limitations, and how the future partnership could be improved to benefit the global community. The authors explain the recent evolution and performance of the G8 and G20 summits and their evolving empirical relationship. They consider the G8/G20 relationship with other actors engaged in global governance, notably the major multilateral organizations and civil society. They assess G7/8 and G20 effectiveness and accountability. And they identify, based on this empirical and analytical foundation, how the relationship can be improved for today's tightly wired world.

Globalization is by no means a new phenomenon; transcontinental trade and the movement of people date back at least 2,000 years, to the era of the ancient Silk Road trade route. The global spread of infectious disease has followed a parallel course. Indeed, the emergence and spread of infectious disease are, in a sense, the epitome of globalization. Although some experts mark the fall of the Berlin Wall as the beginning of this new era of globalization, others argue that it is not so new. The future of globalization is still in the making. Despite the successful attempts of the developed world during the course of the last century to control many infectious diseases and even to eradicate some deadly afflictions, 13 million people worldwide still die from such diseases every year. On April 16 and 17, 2002, the Forum on Emerging Infections held a working group discussion on the influence of globalization on the emergence and control of infectious diseases. The contents of the unattributed sections are based on the presentations and discussions that took place during the workshop. The Impact of Globalization on Infectious Disease Emergence and Control report summarizes the presentations and discussions related to the increasing cross-border and cross-continental movements of people and how this could exacerbate the emergence and global spread of infectious diseases. This report also summarizes the means by which sovereign states and nations must adopt a global public health mind-set and develop a new organizational framework to maximize the opportunities and overcome the challenges created by globalization and build the necessary capacity to respond effectively to emerging infectious disease threats.

Africa has emerged as a prime arena of global health interventions that focus on particular diseases and health emergencies. These are framed increasingly in terms of international concerns about security, human rights, and humanitarian crisis. This presents a stark contrast to the 1960s and '70s, when many newly independent African governments pursued the vision of public health "for all," of comprehensive health care services directed by the state with support from foreign donors. These initiatives often failed, undermined by international politics, structural adjustment, and neoliberal policies, and by African states themselves. Yet their traces remain in contemporary expectations of and yearnings for a more robust public health. This volume explores how medical professionals and patients, government officials, and ordinary citizens approach questions of public health as they navigate contemporary landscapes of NGOs and transnational projects, faltering state services, and expanding privatization. Its contributors analyze the relations between the public and the private providers of public health, from the state to new global biopolitical formations of political institutions, markets, human populations, and health. Tensions and ambiguities animate these complex relationships, suggesting that the question of what public health actually is in Africa cannot be taken for granted. Offering historical and ethnographic analyses, the volume develops an anthropology of public health in Africa. Contributors: Hannah Brown, P. Wenzel Geissler, Murray Last, Rebecca Marsland, Lotte Meinert, Benson A. Mulemi, Ruth J. Prince, Noémi Tousignant, and Susan Reynolds Whyte

This student-friendly textbook offers a comprehensive introduction to globalization studies and the European Union within a multipolar world. It provides its readers with critical analysis of the key concepts of multilateral global and regional governance and Europe's role in the world; and this in an accessible and intelligible fashion. This volume collects contributions by eminent scholars from world class universities from five different continents. As such, this unique exercise in transnational multi-disciplinary cooperation, provides extensive coverage of the main issues pertaining to multilateral cooperation - notably its history, troubles, legitimacy challenges and efficiency questions - from a variety of national perspectives. The book covers the major issues confronting students of European and global studies, amongst which: pressing security challenges, new forms of institutionalized cooperation, shifting international trade flows, the notion of responsibility to protect, social imbalances and environmental emergencies, the need for less contingent forms of legitimacy for global regulation, as well as global public opinion and transnational civil society networks. Each chapter includes a summary of its salient points; methodological indications; illuminating illustrations; and a suggested list for further reading. This textbook strives to help students develop a better and more secure grasp of the innovative balance between interdisciplinary openness and disciplinary rigor when engaging with global governance studies, comparative regionalism, normative studies, international political economy or international law.

This volume addresses the ideational and policy-oriented challenges of Africa's health governance due to voluntary and involuntary cross-border migration of people and diseases in a growing 'mobile Africa'. The collected set of specialized contributions in this volume examines how national and regional policy innovation can address the competing conception of sovereignty in dealing with Africa's emerging healthcare problems in a fast-paced, interconnect world.

In *Para-States and Medical Science*, P. Wenzel Geissler and the contributors examine how medicine and public health in Africa have been transformed as a result of economic and political liberalization and globalization, intertwined with epidemiological and technological changes. The resulting fragmented medical science landscape is shaped and sustained by transnational flows of expertise and resources. NGOs, universities, pharmaceutical companies and other nonstate actors now play a significant role in medical research and treatment. But as the contributors to this volume argue, these groups have not supplanted the primacy of the nation-state in Africa. Although not necessarily stable or responsive, national governments remain crucial in medical care, both as employers of health care professionals and as sources of regulation, access, and – albeit sometimes counterintuitively – trust for their people. “The state” has morphed into the “para-state” — not a monolithic and predictable source of sovereignty and governance, but a shifting, and at times ephemeral, figure. Tracing the emergence of the “global health” paradigm in Africa in the treatment of HIV, malaria, and leprosy, this book challenges familiar notions of African statehood as weak or illegitimate by elaborating complex new frameworks of governmentality that can be simultaneously functioning and dysfunctional. Contributors: Uli Beisel, Didier Fassin, P. Wenzel Geissler, Rene Gerrets, Ann Kelly, Guillaume Lachenal, John Manton, Lotte Meinert, Vinh-Kim Nguyen, Branwyn Poleykett, Susan Reynolds Whyte

Since 2000, IOM has been producing world migration reports. The World Migration Report 2020, the tenth in the world migration report series, has been produced to contribute to increased understanding of migration throughout the world. This new edition presents key data and information on migration as well as thematic chapters on highly topical migration issues, and is structured to focus on two key contributions for readers: Part I: key information on migration and migrants (including migration-related statistics); and Part II: balanced, evidence-based analysis of complex and emerging migration issues.

Health is a highly valued, visible, and concrete investment that has the power to both save lives and enhance the credibility of the United States in the eyes of the world. While the United States has made a major commitment to global health, there remains a wide gap between existing knowledge and tools that could improve health if applied universally, and the utilization of these known tools across the globe. The U.S. Commitment to Global Health concludes that the U.S. government and U.S.-based foundations, universities, nongovernmental organizations, and commercial entities have an opportunity to improve global health. The book includes recommendations that these U.S. institutions increase the utilization of existing interventions to achieve significant health gains; generate and share knowledge to address prevalent health problems in disadvantaged countries; invest in people, institutions, and capacity building with global partners; increase the quantity and quality of U.S. financial commitments to global health; and engage in respectful partnerships to improve global health. In doing so, the U.S. can play a major role in saving lives and improving the quality of life for millions around the world.

Fully revised and updated, this fourth edition equips students, advocates, and health professionals with building blocks for a critical understanding of global health. It explores societal determinants of health and health inequities within and between countries and an array of actions seeking to address these issues in spheres of health and development aid, solidarity cooperation, global and domestic policymaking, and civil society mobilization

Sharing biological resources-critical for new medicines and vaccines-has declined as countries and scientists dispute rights over research.

This book deals with Israeli development aid to Sub-Saharan Africa countries as a part of Israeli foreign policy. The analysis is framed by the concept of soft power: an assumption that development cooperation increases attractiveness of the donor and contributes to constructive bilateral and multilateral relations. Israel is a particular case of a donor, as it concentrates on technical aid and its aid is motivated by a particular set of ideological and pragmatic motives. Covering the period since the 1950s till today, the book analyses particular Israeli resources relevant for African development and the system and contents of Israeli development aid, with a particular focus on a new phenomenon of the engagement of businesses and NGOs. Zielińska explores the geopolitical context of Israeli aid for Sub-Saharan countries and the recipients' perception of Israeli aid; asking if and how these attitudes influence the recipients' behaviour towards Israel within their bilateral relations as well as on multilateral forums. Contributing to the knowledge of development diplomacy as a form of expression of soft power and as a tool of foreign policy, it will be of interest to international relations' students and faculty as well as to other people professionally dealing with Israeli foreign policies.

This book explores the nexus between natural resources ownership and the right to development in Africa. The right to sovereignty over natural resources and the right to development are recognised and protected in an extensive framework of international, regional and domestic instruments. They guarantee people's entitlement to fully and freely utilise their natural resources as a means of subsistence and for economic, social and cultural development. Yet, despite the abundance of natural resources in Africa a majority of the people on the continent remain largely impoverished. This book articulates the central argument that to achieve the right to development in Africa requires appropriate governance of the continent's natural resources to which the people of Africa are guaranteed sovereign ownership. With case study illustrations from Zimbabwe, Ghana, Ethiopia and the Democratic Republic of Congo, chapters explore the normative measures, specific guarantees and community entitlements to natural resources for the realisation of the right to development. The book will be an invaluable guide to scholars and postgraduate students of Natural Resources, Development and African studies as well as policymakers and practitioners in these areas.

Medical research has been central to biomedicine in Africa for over a century, and Africa, along with other tropical areas, has been crucial to the development of medical science. At present, study populations in Africa participate in an increasing number of medical research projects and clinical trials, run by both public institutions and private companies. Global debates about the politics and ethics of this research are growing and local concerns are prompting calls for social studies of the "trial communities" produced by this scientific work. Drawing on rich, ethnographic and historiographic material, this volume represents the emergent field of anthropological inquiry that links Africanist ethnography to recent concerns with science, the state, and the culture of late capitalism in Africa.

Now in paperback—with a new preface by the author Americans have long been protective of the country's sovereignty—all the way back to George Washington who, when retiring as president, admonished his successors to avoid “permanent” alliances with foreign powers. Ever since, the nation has faced periodic, often heated, debates about how to maintain that sovereignty, and whether and when it is appropriate to cede some of it in the form of treaties and the alliances about which Washington warned. As

the 2016 election made clear, sovereignty is also one of the most frequently invoked, polemical, and misunderstood concepts in politics—particularly American politics. The concept wields symbolic power, implying something sacred and inalienable: the right of the people to control their fate without subordination to outside authorities. Given its emotional pull, however, the concept is easily high-jacked by political opportunists. By playing the sovereignty card, they can curtail more reasoned debates over the merits of proposed international commitments by portraying supporters of global treaties or organizations as enemies of motherhood and apple pie. Such polemics distract Americans from what is really at stake in the sovereignty debate: the ability of the United States to shape its destiny in a global age. The United States cannot successfully manage globalization, much less insulate itself from cross-border threats, on its own. As global integration deepens and cross-border challenges grow, the nation's fate is increasingly tied to that of other countries, whose cooperation will be needed to exploit the shared opportunities and mitigate the common risks of interdependence. The Sovereignty Wars is intended to help today's policymakers think more clearly about what is actually at stake in the sovereignty debate and to provide some criteria for determining when it is appropriate to make bargains over sovereignty—and how to make them.

Questions surrounding democracy, governance, and development especially in the view of Africa have provoked acrimonious debates in the past few years. It remains a perennial question why some decades after political independence in Africa the continent continues experiencing bad governance, lagging behind socioeconomically, and its democracy questionable. We admit that a plethora of theories and reasons, including iniquitous and malicious ones, have been conjured in an attempt to explain and answer the questions as to why Africa seems to be lagging behind other continents in issues pertaining to good governance, democracy and socio-economic development. Yet, none of the theories and reasons proffered so far seems to have provided enduring solutions to Africa's diverse complex problems and predicaments. This book dissects and critically examines the matrix of Africa's multifaceted problems on governance, democracy and development in an attempt to proffer enduring solutions to the continent's long-standing political and socio-economic dilemmas and setbacks.

In the United States, some populations suffer from far greater disparities in health than others. Those disparities are caused not only by fundamental differences in health status across segments of the population, but also because of inequities in factors that impact health status, so-called determinants of health. Only part of an individual's health status depends on his or her behavior and choice; community-wide problems like poverty, unemployment, poor education, inadequate housing, poor public transportation, interpersonal violence, and decaying neighborhoods also contribute to health inequities, as well as the historic and ongoing interplay of structures, policies, and norms that shape lives. When these factors are not optimal in a community, it does not mean they are intractable: such inequities can be mitigated by social policies that can shape health in powerful ways. *Communities in Action: Pathways to Health Equity* seeks to delineate the causes of and the solutions to health inequities in the United States. This report focuses on what communities can do to promote health equity, what actions are needed by the many and varied stakeholders that are part of communities or support them, as well as the root causes and structural barriers that need to be overcome.

The African Union (AU) is a continental organization that comprises every African state except for Morocco, is indeed a pioneering undertaking. Its ambitious aim is to integrate all member states, with the ultimate goal of forming the United States of Africa. Despite several attempts to build a union, the AU has remained an intergovernmental organization, one reason being a perceived unwillingness of the AU states to pool their national sovereignties. This study seeks to comprehend why Africa's integration process has not moved towards a supranational organization, using a novel approach. It shifts the usual perspective away from the organization level and provides the first comprehensive and systematic analysis of the AU from the perspective of the states themselves. It includes 8 comprehensive case studies: Algeria, Burkina Faso, Ethiopia, Mauritius, South African, Swaziland, Uganda and Zimbabwe to help understand their foreign policy and provide key insights into why they are (un)willing to yield sovereignty. This work will be of great interest to students and scholars of African politics, international relations and international organizations.

The G20 needs to be bold and pragmatic if it is to deal effectively with the global economy's big issues. Since its establishment in 1999, the G20 has become a key international forum. But it suffers from inherent design flaws and remains a work in progress. When Australia began its presidency of the 2014 summit in Brisbane, many commentators suggested that Australia's chairing of the G20 would reinvigorate it. This timely book looks at what was achieved at the Brisbane Summit and what has happened in its wake. Crucially, it explores what role the G20 could and should play in dealing with such pressing global issues as international taxation, trade, energy and climate change. Expert contributors, many of them former inside players, assess the impact of the summit in the context of the year's broader geopolitical challenges, including Russia's temporary expulsion from the G8 and the failure of the US to ratify its governance reforms to the IMF. Taking stock, contributors question the effectiveness of the G20, and identify the reforms that are needed if it is to offer strong leadership in an integrated global economy. Together they ask, what is the future of the G20 and other 'Gs'?

In recent public workshops and working group meetings, the Forum on Microbial Threats of the Institute of Medicine (IOM) has examined a variety of infectious disease outbreaks with pandemic potential, including those caused by influenza (IOM, 2005) and severe acute respiratory syndrome (SARS) (IOM, 2004). Particular attention has been paid to the potential pandemic threat posed by the H5N1 strain of avian influenza, which is now endemic in many Southeast Asian bird populations. Since 2003, the H5N1 subtype of avian influenza has caused 185 confirmed human deaths in 11 countries, including some cases of viral transmission from human to human (WHO, 2007). But as worrisome as these developments are, at least they are caused by known pathogens. The next pandemic could well be caused by the emergence of a microbe that is still unknown, much as happened in the 1980s with the emergence of the human immunodeficiency virus (HIV) and in 2003 with the appearance of the SARS coronavirus. Previous Forum meetings on pandemic disease have discussed the scientific and logistical challenges associated with pandemic disease recognition, identification, and response. Participants in these earlier meetings also recognized the difficulty of implementing disease control strategies effectively. *Ethical and Legal Considerations in Mitigating Pandemic Disease: Workshop Summary* as a factual summary of what occurred at the workshop.

The world's problems are indeed world problems: social and environmental crises, global trade and politics, and major epidemics are making public health a pressing global concern. From this constantly changing scenario, global health diplomacy has evolved, at the intersection of public health, international relations, law, economics, and management—a new discipline with transformative potential. *Global Health Diplomacy* situates this concept firmly within the human rights dialogue and provides a solid framework for

understanding global health issues and their negotiation. This up-to-the-minute guide sets out defining principles and the current agenda of the field, and examines key relationships such as between trade and health diplomacy, and between global health and environmental issues. The processes of global governance are detailed as the UN, WHO, and other multinational actors work to address health inequalities among the world's peoples. And to ensure maximum usefulness, the text includes plentiful examples, discussion questions, reading lists, and a glossary. Featured topics include: The legal basis of global health agreements and negotiations. Global public goods as a foundation for global health diplomacy. Global health: a human security perspective. Health issues and foreign policy at the UN. National strategies for global health. South-south cooperation and other new models of development. A volume of immediate utility with a potent vision for the future, *Global Health Diplomacy* is an essential text for public health experts and diplomats as well as schools of public health and international affairs.

The Republic of Therapy tells the story of the global response to the HIV epidemic from the perspective of community organizers, activists, and people living with HIV in West Africa. Drawing on his experiences as a physician and anthropologist in Burkina Faso and Côte d'Ivoire, Vinh-Kim Nguyen focuses on the period between 1994, when effective antiretroviral treatments for HIV were discovered, and 2000, when the global health community acknowledged a right to treatment, making the drugs more available. During the intervening years, when antiretrovirals were scarce in Africa, triage decisions were made determining who would receive lifesaving treatment. Nguyen explains how those decisions altered social relations in West Africa. In 1994, anxious to "break the silence" and "put a face to the epidemic," international agencies unwittingly created a market in which stories about being HIV positive could be bartered for access to limited medical resources. Being able to talk about oneself became a matter of life or death. Tracing the cultural and political logic of triage back to colonial classification systems, Nguyen shows how it persists in contemporary attempts to design, fund, and implement mass treatment programs in the developing world. He argues that as an enactment of decisions about who may live, triage constitutes a partial, mobile form of sovereignty: what might be called therapeutic sovereignty.

Beni-Amer cattle owners in the western part of the Horn of Africa are not only masters in cattle breeding, they are also knowledge sovereign, in terms of owning productive genes of cattle and the cognitive knowledge base crucial to sustainable development. The strong bonds between the Beni-Amer, their animals, and their environment constitute the basis of their ways of knowing, and much of their knowledge system is built on experience and embedded in their cultural practices. In this book, the first to study Beni-Amer practices, Zeremariam Fre argues for the importance of their knowledge, challenging the preconceptions that regard it as untrustworthy when compared to scientific knowledge from more developed regions. Empirical evidence suggests that there is much one could learn from the other, since elements of pastoralist technology, such as those related to animal production and husbandry, make a direct contribution to our knowledge of livestock production. It is this potential for hybridisation, as well as the resilience of the herders, at the core of the indigenous knowledge system. Fre also argues that indigenous knowledge can be viewed as a stand-alone science, and that a community's rights over ownership should be defended by government officials, development planners and policy makers, making the case for a celebration of the knowledge sovereignty of pastoralist communities.

Praise for Knowledge Sovereignty Among African Cattle Herders 'This book greatly contributes to the limited literature on theoretical discourses and practices on indigenous knowledge of livestock herding communities in the Horn of Africa. It discusses knowledge heritage and sovereignty through the presentation of valid empirical evidence, and its subsequent relevance in nurturing sustainability of knowledge systems to enhance lives of pastoralists in Africa and beyond.' Samuel Tefera PhD, Assistant Professor and Asian Desk Coordinator at the Centre for African and Oriental Studies, Associate Dean for Research and Technology Transfer, College of Social Sciences, Addis Ababa University 'The author has worked with our Beni-Amer pastoral communities in Eastern Sudan and Western Eritrea for over 30 years and this book is the first of its kind in documenting our practices, knowledge systems, heritage and way of life.' Mustafa Faid and Mohamed Ali, Leaders of the of the Pastoral and Environmental Association Kassala State (PEAKS) 'A riveting and rare book! Zeremariam Fre guides you along the sandy [dusty] tracks and grassy pastures that the Beni-Amer and their herds have been softly tracing over time all through the Horn of Africa. One of the virtues of the book is that it illustrates vividly and in clear language how their continuous self-built endogenous knowledge on agro-pastoral life is not only at the core of their survival and the survival of their herds, but more importantly a powerful weapon in facing and resisting multiple aggressions . . . Ground-breaking and a huge achievement.' Yves Cabannes, Emeritus Professor of Development Planning,, The Bartlett Development Planning Unit, UCL 'The book underlines the importance of enriching and utilizing the unrecognized, yet valuable scientific knowledge and practices that are deeply rooted in pastoral traditional expertise about their own environment and breeding practices. It is an important publication that reflects Dr Fre's expertise and long term research in the region and thus, it is a significant addition to the African library.' Hala Alkarib, Director of the Strategic Initiative for Women in the Horn of Africa (SIHA) 'This fascinating book not only gives a unique insight into the knowledge and practice of pastoralists in the Horn of Africa from the author's first-hand experience, it also provides an incisive critique of the multiple dimensions of knowledge, paying tribute to the sovereignty of indigenous knowledge. It has a timely relevance for global sustainability that will appeal to a wider readership.' Nicole Kenton, International Development Consultant, former long serving senior staff member of the International Institute for Environment and Development (IIED) 'The book covers several intertwined issues relevant to contemporary development policy and practice. It goes beyond the rural-urban and peasant-nomadic livelihoods dichotomy by shedding more light on the inter-linkages within the multiple livelihood systems within the Horn of Africa and globally. A rich evidence-based resource for academics, development partners and social movements for promoting and designing state policies that embrace pastoralist aspirations.' Bereket Tsegay MA, PhD candidate, Pastoral and Environmental Network in the Horn of Africa (PENHA) 'Dr Zeremariam Fre has done a wonderful job of placing at the centre of this book the Beni-Amer pastoralists, the world they inhabit and the knowledge they use to navigate and thrive in it. The lessons contained in this book go beyond pastoralism; it is a must read for anyone serious about understanding the importance of located knowledge in the innovation and development process.' Yusuf Dirie, PENHA Research Fellow and PhD researcher at the University of Sussex

Climate change control has risen to the top of the international agenda. Failed efforts, centred in the United Nations, to allocate responsibility have resulted in a challenge now reaching crisis stage. John J. Kirton and Ella Kokotsis analyse the generation and effectiveness of four decades of intergovernmental regimes for controlling global climate change. Informed by international relations theories and critical of the prevailing UN approach, Kirton and Kokotsis trace the global governance of climate change from its 1970s origins to the present and demonstrate the effectiveness of the plurilateral summit alternative grounded in the G7/8

and the G20. Topics covered include: - G7/8 and UN competition and convergence on governing climate change - Kyoto obligations and the post-Kyoto regime - The role of the G7/8 and G20 in generating a regime beyond Kyoto - Projections of and prescriptions for an effective global climate change control regime for the twenty-first century. This topical book synthesizes a rich array of empirical data, including new interview and documentary material about G7/8 and G20 governance of climate change, and makes a valuable contribution to understanding the dynamics of governing climate change. It will appeal to scholars, researchers, and policy makers interested in the dynamics behind governance processes within the intergovernmental realm.

This book focuses on Africa's challenges, achievements, and failures over the past several centuries using an interdisciplinary approach that combines theory and fact and evidence-based practices and interventions in public health, and argues that most of the health problems in Africa are not a result of scarce or lack of resources, but of the misconceived and misplaced priorities that have left the continent behind every other on the globe in terms of health, education, and equitable distribution of opportunities and access to (quality) health as agreed by the United Nations member states at Alma-Ata in 1978.

Langan reclaims neo-colonialism as an analytical force for making sense of the failure of 'development' strategies in many African states in an era of free market globalisation. Eschewing polemics and critically engaging the work of Ghana's first President – Kwame Nkrumah – the book offers a rigorous assessment of the concept of neo-colonialism. It then demonstrates how neo-colonialism remains an impediment to genuine empirical sovereignty and poverty reduction in Africa today. It does this through examination of corporate interventions; Western aid-giving; the emergence of 'new' donors such as China; EU-Africa trade regimes; the securitisation of development; and the UN Sustainable Development Goals. Throughout the chapters, it becomes clear that the current challenges of African development cannot be solely pinned on so-called neo-patrimonial elites. Instead it becomes imperative to fully acknowledge, and interrogate, corporate and donor interventions which lock many poorer countries into neo-colonial patterns of trade and production. The book provides an original contribution to studies of African political economy, demonstrating the on-going relevance of the concept of neo-colonialism, and reclaiming it for scholarly analysis in a global era.

The most recent Ebola epidemic that began in late 2013 alerted the entire world to the gaps in infectious disease emergency preparedness and response. The regional outbreak that progressed to a significant public health emergency of international concern (PHEIC) in a matter of months killed 11,310 and infected more than 28,616. While this outbreak bears some unique distinctions to past outbreaks, many characteristics remain the same and contributed to tragic loss of human life and unnecessary expenditure of capital: insufficient knowledge of the disease, its reservoirs, and its transmission; delayed prevention efforts and treatment; poor control of the disease in hospital settings; and inadequate community and international responses. Recognizing the opportunity to learn from the countless lessons of this epidemic, the National Academies of Sciences, Engineering, and Medicine convened a workshop in March 2015 to discuss the challenges to successful outbreak responses at the scientific, clinical, and global health levels. Workshop participants explored the epidemic from multiple perspectives, identified important questions about Ebola that remained unanswered, and sought to apply this understanding to the broad challenges posed by Ebola and other emerging pathogens, to prevent the international community from being taken by surprise once again in the face of these threats. This publication summarizes the presentations and discussions from the workshop.

Focused on Botswana's only dedicated oncology ward, *Improvising Medicine* renders the experiences of patients, their relatives, and clinical staff during a cancer epidemic.

Today's era of intense globalization has unleashed dynamic movements of people, pathogens, and pests that overwhelm the static territorial jurisdictions on which the governance provided by sovereign states and their formal intergovernmental institutions is based. This world of movement calls for new ideas and institutions to govern people's health, above all in Africa, where the movements and health challenges are the most acute. This book insightfully explores these challenges in ways that put the perspectives of Africans themselves at centre stage. It begins with the long central and still compelling African health challenge of combating the pandemic of HIV/AIDS. It then examines the global governance responses by the major multilateral organizations of the World Bank and the World Trade Organization and the newer informal flexible democratically oriented ones of the Group of Eight. It also addresses the compounding health challenge created by climate change to assess both its intensifying impact on Africa and how all international institutions have largely failed to link climate and health in their governance response. It concludes with several recommendations about the innovative ideas and institutions that offer a way to closing the great global governance gaps and thus improving Africans' health and that of citizens beyond.
