The first edition of BANK 2.0—#1 on Amazon's bestseller list for banking and finance in the US, UK, Germany, France, and Japan for over 18 months—took the financial world by storm and became synonymous with disruptive customer behaviour, technology shift, and new banking models. In BANK 3.0, Brett King brings the story up to date with the latest trends redefining financial services and payments—from the global scramble for dominance of the mobile wallet and the expectations created by tablet computing to the operationalising of the cloud, the explosion of social media, and the rise of the de-banked consumer, who doesn't need a bank at all. BANK 3.0 shows that the gap between customers and financial services players is rapidly widening, leaving massive opportunities for new, non-bank competitors to totally disrupt the industry. "On the Web and on Mobile, the customer isn't king—he's dictator. Highly impatient, skeptical, cynical. Brett King understands deeply what drives this new hard-nosed customer. Banking professionals would do well to heed his advice." —Gerry McGovern, author of Killer Web Content

Ever feel like you're being watched? This eye-opening book shows how a new technology may soon track your every move . . . and pave the way for the fulfillment of end-time biblical prophecy. A revolutionary technology called RFID (Radio Frequency IDentification) is poised to expose our habits, secrets, and slip-ups to money-hungry marketers, savvy criminals, and government snoops. One day soon, our shoes could keep track of our footsteps. Stores could ID us as we walk in the door. Hidden "tracking units" could log even our restroom visits. Global corporations and government agencies have already invested millions in a plan that uses tiny microchips to uniquely number and track everyday items. Parts of this Orwellian vision are uncannily similar to the prophecies of Revelation. Chipping inanimate objects is just the start—the endpoint is a form of RFID that can be injected into the flesh. This work-an updated version of Katherine Albrecht and Liz McIntyre's controversial and award-winning book Spychips—is a clarion call to Christians to take a stand against plans to monitor and control people through this unnerving new technology. Using public records, real-world examples, and biblical prophecies, Albrecht and McIntyre uncover the frightening story behind RFID and show us how to protect our privacy and civil liberties while there's still time.

This book documents and examines the history of technology used by consumers to serve oneself. The telephone's development as a self-service technology functions as the narrative spine, beginning with the advent of rotary dialing eliminating most operator services and transforming every local connection into an instance of self-service. Today, nearly a century later, consumers manipulate 0-9 keypads on a plethora of digital machines. Throughout the book Palm employs a combination of historical, political-economic and cultural analysis to describe how the telephone keypad was absorbed into business models across media, retail and financial industries, as the interface on everyday machines including the ATM, cell phone and debit card reader. He argues that the naturalization of self-service telephony shaped consumers' attitudes and expectations about digital technology.

There is a legend of a Welsh Prince Madoc whose ship became stuck in Chesapeake Bay. After trying unsuccessfully to escape, he had his men row out with the anchor, drop it as far into the sea as they could, and then the ship winched its way forward. The image of the church as a boat and tradition as an anchor is prevalent in Christian art. If we examine the biblical view of an anchor, we find, like Prince Madoc, we are to cast our anchor into the future and pull the church forward. Postmodern pilgrims must strive to keep the past and the future in perpetual conversation so every generation will find a fresh expression of the Gospel that is anchored solidly to “the faith that was once for all delivered.”
