The Condition Assessment Scheme (CAS) for oil tankers was adopted in 2001 and is applicable to all single-hull tankers of 15 years or older. Although the CAS does not specify structural standards in excess of the provisions of other IMO conventions, codes and recommendations, its requirements stipulate more stringent and transparent verification of the reported structural condition of the ship and that documentary and survey procedures have been properly carried out and completed. The Scheme requires that compliance with the CAS is assessed during the Enhanced Survey Program of Inspections concurrent with intermediate or renewal surveys currently required by resolution A.744(18), as amended.--Publisher's description.

This Section of the Manual on Oil Pollution is intended to provide practical guidance related to the prevention of pollution from ships, and describes procedures for the handling of oil cargoes, bunkering, ship-to-ship transfer operations, transfer operations involving offshore units and operations in ice-covered waters. It also provides an overview of the various prevention practices, as a complement to the more detailed industry standards and Codes of Practice, currently available. The information provided is not intended to supersede or replace any information, law, or regulation contained in any other publication with respect to the waters and areas to which it pertains.

Ship management has constantly had to evolve to take into account the advancements in technology as well as

the demands of the shipping industry. Having internet access and email on board ship has meant that the ship manager has to possess certain sets of skills to function effectively in the post, including computer literacy. The emergence of large multi-national ship management companies has also changed how business is conducted and this in turn means that the ship manager and tiers of management within the organization have had to evolve to cope with the demands of working with a multi-national workforce. Furthermore, since the mid-1980s there has been an ever expanding raft of legislation that is more restrictive for companies to meet, and a shrinking of profit margins has seen a shift in how companies are required to operate to survive. This book addresses the demands of 21st century ship management with the focus of the book as much about the people who manage ships as about the theory and practice of ship management.

In the last few years, the quantity of books and papers on the political, economic and legal problems of the exploration and use of the sea and marine resources has considerably increased. But the status and activities of international organizations related to maritime shipping, fisheries, scientific research in the World Ocean and the protection of the marine environment have not yet, as a whole, been represented in the scientific and reference literature. It would be fair, though, to mention that some general information on marine international organizations may be found in the Yearbook of International

Organizations, Brussels, 1979; in Annotated Acronyms and Abbreviations of Marine Science Related International Organizations, U. S. Department of Commerce, 1976; and in the UN Annotated Directory of Intergovernmental Organizations Concerned with Ocean Affairs, 1976. Voluminous information on organizations engaged in problems of the exploration and use of the sea is given in International Marine Organizations by the well-known Polish scientists Lopuski and Symonides, 1978. Meanwhile the increasing volume of practical work related to the participation of governmental and scientific bodies as well as individual scientists and specialists in these organizations, the necessity of long-term planning in this field, and the perspectives of the development of these organizations, make necessary a special publication depicting the structure and many-sided activities of such international bodies. This book is the first one in which the most complete information on the main marine international organizations is presented.

This publication shows designated first-aid providers how to diagnose, treat, and prevent the health problems of seafarers on board ship. This edition contains fully updated recommendations aimed to promote and protect the health of seafarers, and is consistent with the latest revisions of both the WHO Model List of Essential Medicines and the International Health Regulations.--Publisher's description.

This publication contains the text of guidelines for inert gas systems and relevant IMO documents on inert gas systems and supersedes the publication 860 83.15.E.

The safety record of lightering (the transfer of petroleum cargo at sea from a large tanker to smaller ones) has been

excellent in U.S. waters in recent years, as evidenced by the very low rate of spillage of oil both in absolute terms and compared with all other tanker-related accidental spills. The lightering safety record is likely to be maintained or even improved in the future as overall quality improvements in the shipping industry are implemented. Risks can be reduced even further through measures that enhance sound lightering standards and practices, support cooperative industry efforts to maintain safety, and increase the availability of essential information to shipping companies and mariners. Only continued vigilance and attention to safety initiatives can avert serious accidents involving tankers carrying large volumes of oil.

The 2020 edition of the 2011 ESP Code provides requirements for an enhanced programme of inspections during surveys of single-hull and of double-hull bulk carriers and single-hull and double-hull oil tankers, in accordance with the provision of SOLAS regulation XI-1/2 and in line with the IACS UR Z10 series. It provides, in particular, special requirements for: (1) Renewal, annual and intermediate surveys; (2) Preparation for surveys; (3) Documentation on board; (4) Procedures for thickness measurements; (5) Reporting and evaluation of surveys

Intended to familiarise Masters, ship operators, F(P)SO Operators and project development teams with the general principles and equipment involved in F(P)SO - CT operations, these guidelines provide an understanding of the issues including design, equipment, operations, and environmental limitations in operation.

Maritime Technology and Engineering 3 is a collection of papers presented at the 3rd International Conference on Maritime Technology and Engineering (MARTECH 2016, Lisbon, Portugal, 4-6 July 2016). The MARTECH

Conferences series evolved from biannual national conferences in Portugal, thus reflecting the internationalization of the maritime sector. The keynote lectures and the papers, making up nearly 150 contributions, came from an international group of authors focused on different subjects in a variety of fields: Maritime Transportation, Energy Efficiency, Ships in Ports, Ship Hydrodynamics, Ship Structures, Ship Design, Ship Machinery, Shipyard Technology, Safety & Reliability, Fisheries, Oil & Gas, Marine Environment, Renewable Energy and Coastal Structures. Maritime Technology and Engineering 3 will appeal to academics, engineers and professionals interested or involved in these fields.

This new edition of the handbook of Quay Walls provides the reader with essential knowledge for the planning, design, execution and maintenance of quay walls, as well as general information about historical developments and lessons learned from the observation of ports in various countries. Technical chapters are followed by a detailed calculation

General principles. Conditions and requirements.

Communications general communications, language, pre arrival communications.

Acclaimed as the standard reference work on the law relating to time charters, this new edition provides a comprehensive treatment of the subject, accessible and useful both to shipping lawyers and to shipowners, charterers, P&I Clubs and other insurers. It provides full coverage of both English and U.S. law, now updated with all the important decisions since the previous edition.

The English decisions covered in the new edition include: The Kos (the Supreme Court on the effect of withdrawing a ship with cargo on board); The Athena (nature of off-hire; meaning of 'loss of time'/'time thereby lost'); The Kyla (damage to ship and frustration); The Silver Constellation, The Savina Caylyn and The Rowan (oil company approval of chartered ships); The Captain Stefanos, The Saldanha, The Triton Lark and The Paiwan Wisdom (effects of piracy); The Kildare and The Wren (damages for early termination); The T S Singapore (off-hire where ship going 'towards but not to' the port ordered), and The Lehmann Timber, The Bulk Chile and The Western Moscow (owners' liens) The new edition also features many significant new U.S. decisions, including: Stolt-Nielsen v. Animal Feeds Intl. (Supreme Court rules class-action arbitration not permitted unless parties agree in arbitration agreement); ATHOS I (Circuit Court finds that safe berth provision in charterparty is a warranty and not merely a due diligence obligation); The M/V SAMHO DREAM (arbitrators direct petitioner to post \$14.2M security on respondent's counterclaim) and Maroc Fruit Board v. M/V VINSON (CP arbitration clause incorporated in bill of lading not "signed" or "contained in an exchange of letters or telegrams" under NY Convention).

For centuries, jetties and wharfs have been designed and built around the world and play an important role in contemporary ports. The difference in the use of jetties, piers and wharfs is that jetties are frequently used for the transshipment and storage of light materials and ro-ro traffic, while piers are generally used for heavy loads like

iron ore. That is why piers are mostly designed and constructed like quay walls (which are beyond the scope of this handbook). The designs were originally based on trial and error and the insights of those who dared to conquer local conditions, such as wind, waves, currents and soil composition. Design and construction techniques have since evolved into the designs we see on the coast or in river ports and seaports nowadays. The purpose of this handbook is to provide insight and guidelines regarding aspects that are important in the design of jetties and wharfs. Jetty-specific issues such as loads, interfaces between materials, installations on jetties and wharfs, as well as detailing aspects, are also covered. This handbook is part of a series of Dutch port infrastructure design recommendations that include the Quay Walls handbook and Jetties and Wharfs handbook. "This book not only brings together existing guidance on hydraulic design, including design wave conditions, prediction of scour and vessel mooring loads, but also presents new methods (developed from extensive laboratory testing) for the prediction of wave loading, including forces on the underside of jetty decks. These guidelines will help maritime designers to optimise jetty designs, and are an essential reference resource."--BOOK JACKET.

The TransNav 2013 Symposium held at the Gdynia Maritime University, Poland in June 2013 has brought together a wide range of participants from all over the world. The program has offered a variety of contributions, allowing to look at many aspects of the navigational safety from various different points of view. Topics presented and discussed at the Symposium were: navigation, safety at sea, sea transportation, education of navigators and simulator-based

training, sea traffic engineering, ship's manoeuvrability, integrated systems, electronic charts systems, satellite, radio-navigation and anti-collision systems and many others. This book is part of a series of four volumes and provides an overview of Transport and Shipping and is addressed to scientists and professionals involved in research and development of navigation, safety of navigation and sea transportation.

Over the past twenty years there has been considerable improvement and new information in the design of port and berth structures. This handbook reflects the latest progress and developments in navigation safety, port planning and site selection, layout of container, oil and gas terminals, cargo handling, berth design and construction, fender and mooring principles. It presents guidelines and recommendations for the main items and assumptions in the layout, design and construction of modern port structures, and the forces and loadings acting on them. The book provides an evaluation of different designs and construction methods for port and berth structures, and recommendations given by the different international harbour standards and recommendations. Practising harbour and port engineers and students will find the handbook an invaluable source of information.

Michael D. Tusiani and Gordon Shearer uses everyday language and real-world examples to help readers understand the complex LNG industry. It provides the reader with insights into changes in the markets, technological advances, and the commercial evolution of what continues to be one of the most capital-intensive and formidable global industries. Features Include: Explains the technologies utilized: liquefaction, shipping and regasification, onshore and floating Covers existing and proposed worldwide LNG projects Examines the economics and commercial structure of the LNG industry, including synopses gas supply agreements, LNG sales contracts, and financing Discusses shipping conventions and regulations This book is an important resource for energy industry leaders, investment bankers, energy professionals, or anyone looking to expand their knowledge of the LNG industry.

The passage of the Oil Pollution Act of 1990 (OPA 90) by Congress and subsequent modifications of international maritime regulations resulted in a far-reaching change in the design of tank vessels. Double-hull rather than single-hull tankers are now the industry standard, and nearly all ships in the world maritime oil transportation fleet are expected to have double hulls by about 2020. This book assesses the impact of the double hull and related provisions of OPA 90 on ship safety, protection of the marine environment, and the economic viability and operational makeup of the maritime oil transportation industry. The influence of international conventions on tank vessel design and operation is addressed. Owners and operators of domestic and international tank vessel fleets, shipyard operators, marine architects, classification societies, environmentalists, and state and federal regulators will find this book useful.
