I have one simple rule: no sexual contact. Yeah, I'm a male escort, but that doesn't mean my body's for sale. I provide companionship to women who can afford it and understand my rule. It's simple really. I need to be in control, not my body. Someone already screwed me once when I lost control, and not in the good way. So, no sexual contact. Sure. I'll kiss them, and I'll even give them a little strip tease if they don't mind seeing the scars from my SEAL days, but nothing more. Damn. At least that's the way it's supposed to be. The way it was. Until her. Until Serena. The little socialite gets under my skin and is hot as sin. I was just supposed to be her arm candy for a few events, but I can't help it. I want more. I want her. And I want to break my one simple

A unique approach to sensorless control and regulator design of electric drives Based on the author's vast industry experience and collaborative works with other industries, Control of Electric Machine Drive Systems is packed with tested, implemented, and verified ideas that engineers can apply to everyday problems in the field. Originally published in Korean as a textbook, this highly practical updated version features the latest information on the control of electric machines and apparatus, as well as a new chapter on sensorless control of AC machines, a topic not covered in any other publication. The book begins by explaining the features of the electric drive system and trends of development in related technologies, as well as the basic structure and operation principles of the electric machine. It also addresses steady state characteristics and control of the machines and the transformation of physical variables of AC machines using reference frame theory in order to provide a proper foundation for the material. The heart of the book reviews several control algorithms of electric machines and power converters, explaining active damping and how to regulate current, speed, and position in a feedback manner. Seung-Ki Sul introduces tricks to enhance the control performance of the electric machines, and the algorithm to detect the phase

angle of an AC source and to control DC link voltages of power converters. Topics also covered are: Vector control Control algorithms for position/speed sensorless drive of AC machines Methods for identifying the parameters of electric machines and power converters The matrix algebra to model a three-phase AC machine in d-q-n axes Every chapter features exercise problems drawn from actual industry experience. The book also includes more than 300 figures and offers access to an FTP site, which provides MATLAB programs for selected problems. The book's practicality and realworld reliability make it an invaluable resource for professionals and engineers involved in the research and development of electric machine drive business, industrial drive designers, and senior undergraduate and graduate students. The fifth edition has been updated to reflect advances that have occurred in the field of psychology in the past few years. It presents new findings that have been obtained with respect to the correlates of personality traits, the dynamics of motives and goals in human lives, and the meanings and manifestations of life stories. Discussions are included on the new ideas on evolution and morality as well as the role of culture in personality. Psychologists will also find a much stronger and detailed discussion of psychophysiology of

In *Experiencing God*, Thomas H. Green, S.J., presents a brief and accessible guide to prayer. Green reminds readers that prayer life is, above all, a relationship with God and a deepening of our experience of God. Fr. Green, who died in 2009, spent a lifetime teaching fellow Christians to pray. *Experiencing God* is a treasury of his best insights. Drawn from lectures given by Fr. Green, *Experiencing God* is now in print for the first time—an appropriate commemoration of the faithful life and work of this beloved teacher and author. Ideally suited to faith sharing groups, parish retreats, and ministry formation workshops.

Balancing biological, psychological, social, and cultural approaches, the Fourth Canadian Edition of *Abnormal Psychology*'s groundbreaking integrative approach is the most modern, scientifically valid method for studying abnormal psychology. The author team--now including Dr. Martin Lalumire--continues to blend sophisticated

research and an accessible writing style with the most widely recognized method of discussing psychopathology. Going beyond simply describing different schools of thought on psychological disorders, the authors explore the interactions of the various forces that contribute to psychopathology. A conversational writing style, consistent pedagogical elements, integrated case studies, and superior coverage of the DSM-5 (with insights from author David Barlow, an Advisor to the DSM-5 task force) help lead students to an unparalleled appreciation for the current state of what is a multidimensional and compelling clinical science.

A collection of 300 multiple-choice questions which are divided into subject chapters corresponding with those in General and Systematic Pathology, a complementary text. However, full explanatory answers are supplied so that this book may be used with any pathology textbook. The questions take the form of a stem with five branches which must be marked true or false. This is the most commonly used system of questions in British medical schools and is usually scored as +1 for a correct response and zero for no response.

The Neural Control of Behavior contains some of the material presented and discussed at the first interdisciplinary conference on the neural control of behavior, held at the Department of Psychobiology of the University of California, Irvine in June 1968. The compendium presents papers prepared by scientists from a variety of disciplines, which touched upon the primary concerns of psychobiology. Main topics covered include neural mechanisms, evoked responses and

network dynamics, perceptual mechanisms, and behavioral and cellular responses to novel and repeated stimuli. Hypothalamic mechanisms for motivational and species-typical behavior, learning and memory, and the behavior of hippocampal neurons during conditioning experiments are also discussed. Psychologists, neurologists, and psychobiologists will find the book very insightful.

Questions about the life and times of Jesus Christ, one of the most written-about people of all time, continue to intrigue us two millennia after his death. Between the vagueness of the canonical Gospels and the sensational claims made in modern films and books, what is a Christian to believe about the only Son of God? Employing a popular take on current New Testament scholarship, Jesuit scholar Father Daniel Harrington explores difficult as well as less complicated issues surrounding the life of Christ.

From the first day your students begin to learn the vocabulary of algebra until the day they take final exams and standardized tests, these programs strengthen student understanding and provide the tools students need to succeed.
