The only book of its kind in English, *Japanese for Healthcare Professionals* is a proficiency-based conversation textbook offering a complete Japanese language course that teaches Japanese grammar along with the vocabulary of medical care. With nearly three million Japanese tourists visiting the United States last year, and another five hundred thousand expatriates residing in the US and other English-speaking countries, it is inevitable that many Japanese speakers find themselves in need of healthcare but unable to communicate. Important highlights of this book are: Accompanying MP3 Audio Disc. No prior knowledge of Japanese necessary. For all professionals seeking to communicate in healthcare situations. Includes an English–Japanese dictionary of medical terms, a glossary of common complaints, and a sample bilingual medical questionnaire. *Japanese for Healthcare Professionals* offers a complete language course for classroom study or independent learners that teaches Japanese grammar along with the medical Japanese vocabulary. The chapters cover every step of a patient's interaction with care providers, from appointments and admissions to the physical examination, symptoms and illnesses, diagnosis, treatment, instructions to the patient, discharge, and follow-up. Chapters are devoted to the major branches of medicine as well as dentistry and to the corresponding bodily systems. There are also chapters on anatomy, infection and disease, and visits to the pharmacy. Each chapter follows a natural progression designed to help the learner comprehend the new material and acquire the language as effortlessly as possible. Each includes: basic Japanese vocabulary, a situational dialogue, Japanese grammar points and key Japanese language and culture notes, exercises and practice drills, and a quiz to sharpen comprehension. The culture and language notes seek to help the provider understand better a Japanese patient's cultural framework and patterns of belief, as well as the "un-translatable" meaning conveyed by certain idioms. The accompanying MP3 audio disc ties in core parts of each chapter, allowing learners to practice their spoken language skills outside a classroom setting. The book also includes thirty illustrations to help with vocabulary acquisition, a pronunciation guide, an English–Japanese dictionary of medical terms, a glossary of Japanese expressions for common complaints, a sample bilingual medical questionnaire, and answers to the quizzes. Emphasizing the learner's practical use of the Japanese language for healthcare settings and the importance of culture in understanding, *Japanese for Healthcare Professionals* reflects the national standards in foreign–language education set by the American Council on the Teaching of Foreign Languages (ACTFL).

The United States has long recognized and honored the service and sacrifices of its military and veterans. Veterans who have been injured by their service (whether their injury appears during service or afterwards) are owed appropriate health care and disability compensation. For some medical conditions that develop after military service, the scientific information needed to connect the health conditions to the circumstances of service may be incomplete. When information is incomplete, Congress or the Department of Veterans Affairs (VA) may need to make a "presumption" of service connection so that a group of veterans can be appropriately compensated. The missing information may be about the specific exposures of the veterans, or there may be incomplete scientific evidence as to whether an exposure during service causes the health condition of concern. For example, when the exposures of military personnel in Vietnam to Agent Orange could not be clearly documented, a presumption was established that all those who set foot on Vietnam soil were exposed to Agent Orange. The Institute of Medicine (IOM) Committee was charged with reviewing and describing how presumptions have been made in the past and, if needed, to make recommendations for an improved scientific framework that could be used in the future for determining if a presumption should be made. The Committee was asked to consider and describe the processes of all participants in the current presumptive disability decision-making process for veterans. The Committee was not asked to offer an opinion about past presumptive decisions or to suggest specific future presumptions. The Committee heard from a range of groups that figure into this decision-making process, including past and present staffers from Congress, the VA, the IOM, veterans service organizations, and individual veterans. The Department of Defense (DoD) briefed the Committee about its current activities and plans to better track the exposures and health conditions of military personnel. The Committee further documented the current process by developing case studies around exposures and health conditions for which presumptions had been made. Improving the Presumptive Disability Decision-Making Process for Veterans explains recommendations made by the committee general methods by which scientists, as well as government and other organizations, evaluate scientific evidence in order to determine if a specific exposure causes a health condition.

This updated edition contains more than fifty thousand entries of medical terminology for health professionals.
