The chapters of *Studies on Periodontal Disease* comprise four parts. Part 1 provides basic sciences from the general to the particular. The findings of cell culture and animal models supply the mechanism between periodontal disease and oxidative stress. In part 2, human clinical studies are mainly addressed. The effects of periodontal therapy on circulating oxidative stress are also discussed. The relationships between periodontal disease and

systemic diseases are examined in part 3. The involvement of oxidative stress and inflammation are discussed through in vivo and in vitro study results. Part 4 discusses future strategies, including the effects of antioxidants and nutrition on periodontal disease. This thorough examination of the relationship between oxidative stress and periodontal disease is essential reading for researchers in oxidative stress and periodontal clinicians, alike.

'The introductory account of Mr. Brunton's pony-back journey up the mountainside has real charm. One of his most interesting chapters gives a practical-minded consideration to the probable future of Tibet.' New York Times Paul Brunton was one of a very small number of his generation to travel in India and Tibet so extensively at a time when very few were doing so with such insight and discernment. His journalistic skills produced magnificent descriptions of the snowy peaks and high-desert landscapes of the Himalayan region, but it was the lessons he learned from the holy men he met on his journey that transformed him into one of the great interpreters of the East. In this magnificent spirituality classic, he explains that we all need 'oases of calm in a world of storm', no matter what era we are living in, and that to retreat from our everyday lives for a while is not weakness but strength. By taking the trouble to discover the deep silence within us we will find the benefits of being linked to an 'infinite power, an infinite wisdom, an infinite goodness'. A Hermit In The Himalayas is a fascinating blend of travel writing and profound spiritual experience. As we accompany the author on his journey through the vast Himalayas ranges towards Mount Kailas in Tibet, he also shows us an even more remarkable - and timeless - inner path which will help us cope with the ups and downs of our contemporary world.

Modern architecture is not a new branch of an old tree: it is an altogether new shoot rising beside the old roots. Thus Walter Gropius, one of the pioneers of modern architecture, on the radical departures of the 20th century. In the 1930s, the term International Style came into use to describe a new form of architecture evolved from Bauhaus and its conviction that ""form follows function."" Until the 1980s, International Style set the standard in modern building, with its rational solutions to construction problems. Combining steel, glass and concrete, it established an aesthetic founded on the sheer thrill of pushing to the limits of technical and economic viability. Hence the exhilarating skylines of metropolises worldwide; but also the desolate anonymity of modern suburban environments. This book traces the exciting evolution of a style while examining the individual and regional forms it took, and analyses the ideals and realities of architectural visions of utopia.

As Europe wrangles over questions of national identity, nativism and immigration, Olivier Roy

interrogates the place of Christianity, foundation of Western identity. Do secularism and Islam really pose threats to the continent's 'Christian values'? What will be the fate of Christianity in Europe? Rather than repeating the familiar narrative of decline, Roy challenges the significance of secularized Western nations' reduction of Christianity to a purely cultural force-relegated to issues such as abortion, euthanasia and equal marriage. He illustrates that, globally, quite the opposite has occurred: Christianity is now universalized, and detached from national identity. Not only has it taken hold in the Global South, generally in a more socially conservative form than in the West, but it has also 'returned' to Europe, following immigration from former colonies. Despite attempts within Europe to nationalize or even racialize it, Christianity's future is global, non-European and immigrant-as the continent's Churches well know. This short but bracing book confirms Roy's reputation as one of the most acute observers of our times. It represents a persuasive and novel vision of religion's place in national life today.

Why are we afraid of death? What is acceptance in the face of cancer? How do I decide whose advice to take? How to relax in the certainty of death? Ought we to tell someone when they are dying or not? Is the theory of reincarnation true? What is happening around the dying? How best to support a dying person? My young daughter is asking about death: what do I tell her? How can I celebrate death as you suggest? Osho responds to these questions and many others from those who find themselves inexplicably attracted to the subject, as well as from those who are facing imminent death and from their carers. He does not simply show how our fear of death is based on a misunderstanding of its nature; he also shows how dying is a tremendous opportunity for inner growth and how death is the most sacred of mysteries. Death is not an event but a process, and one that begins with birth. Each exhalation is a small death; each inhalation, a rebirth. When life is lived consciously and totally, death is not a catastrophe but a joyous climax.

The flaws in today's healthcare systems and practices are well-documented: millions remain far from optimal health due to a variety of psychological and social factors; large numbers of patients do not fully cooperate with medical advice; errors in medical decision-making -- some stemming from flaws in interpersonal relations -- regularly lead to needless suffering and death. Further, the effects of emotions, personality, and motivation on healing are not well incorporated into traditional medical care. The Oxford Handbook of Health Psychology compiles the most relevant scholarship from psychology, medicine, and public health to offer a thorough and authoritative model of the biopsychosocial approach to health. A collection of international contributors addresses all relevant concepts in this model, including its applications to health promotion, health behavior change, and treatment.

From the author of the smash-hit bestseller *Firefly Lane* and *True Colors* comes Kristin Hannah's powerful, heartbreaking novel that illuminates the intricate mother-daughter bond and explores the enduring links between the present and the past. One stayed at home to raise her children and manage the family apple orchard; the other followed a dream and traveled the world to become a famous photojournalist. But when their beloved father falls ill, Meredith and Nina find themselves together again, standing alongside their cold, disapproving mother, Anya, who even now, offers no comfort to her daughters. As children, the only connection between them was the Russian fairy tale Anya sometimes told the girls at night. On his deathbed, their father extracts a promise from the women in his life: the fairy tale will be told one last time—and all the way to the end. Thus begins an unexpected journey into the truth of Anya's life in war-torn Leningrad, more than five decades ago. Alternating between the past and present, Meredith and Nina will finally hear the singular, harrowing story of their mother's life, and what they learn is a secret so terrible and terrifying that it will shake the very foundation of their family and change who they believe they are.

Scientific Elite is about Nobel prize winners and the well-defined stratification system in twentieth-century science. It tracks the careers of all American laureates who won prizes from 1907 until 1972, examining the complex interplay of merit and privilege at each stage of their scientific lives and the creation of the ultra-elite in science. The study draws on biographical and bibliographical data on laureates who did their prize-winning research in the United States, and on detailed interviews with forty-one of the

fifty-six laureates living in the United States at the time the study was done. Zuckerman finds laureates being successively advantaged as time passes. These advantages are producing growing disparities between the elite and other scientists both in performance and in rewards, which create and maintain a sharply graded stratification system.
