The most comprehensive guide to aircraft powerplants?fully updated for the latest advances This authoritative textbook contains all the information you need to learn to master the operation and maintenance of aircraft engines and achieve FAA Powerplant certification. The book offers clear explanations of all engine components, mechanics, and technologies. This ninth edition has been thoroughly revised to include the most current and critical topics. Brand-new sections explain the latest engine models, diesel engines, alternative fuels, pressure ratios, and reciprocating and turbofan engines. Hundreds of detailed diagrams and photos illustrate each topic. Aircraft Powerplants, Ninth Edition covers:

- Aircraft powerplant classification and progress
- Reciprocating-engine construction and nomenclature
- Internal-combustion engine theory and performance
- Lubricants and lubricating systems
- Induction systems, superchargers, and turbochargers
- Cooling and exhaust systems
- Basic fuel systems and carburetors
- Fuel injection systems
- Reciprocating-engine ignition and starting systems
- Operation, inspection, maintenance, and troubleshooting of reciprocating engines
- Reciprocating engine overhaul practices
- Principal parts, construction, types, and nomenclature of gas-turbine engines
- Gas-turbine engine theory and jet propulsion principles
- Turbine-engine lubricants and lubricating systems
- Ignition and starting systems of gas-turbine engines
- Turbofan, turboprop, and turboshaft engines
- Gas-turbine operation, inspection, troubleshooting, maintenance, and overhaul
- Propeller theory, nomenclature, and operation
- Turbopropellers and control systems
- Propeller installation, inspection, and maintenance
- Engine indicating, warning, and control systems

Because of the important national defense contribution of large, non-fighter aircraft, rapidly increasing fuel costs and increasing dependence on imported oil have triggered significant interest in increased aircraft engine efficiency by the U.S. Air Force. To help address this need, the Air Force asked the National Research Council (NRC) to examine and assess technical options for improving engine efficiency of all large non-fighter aircraft under Air Force command. This report presents a review of current Air Force fuel consumption patterns; an analysis of previous programs designed to replace aircraft engines; an examination of proposed engine modifications; an assessment of the potential impact of alternative fuels and engine science and technology programs, and an analysis of costs and funding requirements. This report documents the results of an evaluation of the current maintenance concept for the T56 engine, major modules (compressor, turbine and gearbox), and their major indentured components performed for SA-ALC/LPE. The study compared the present T56 maintenance approach which includes parts life tracking (PLT) and modular maintenance to

The Shelby Cobra is one of the most legendary sports cars in automotive history. Only about 1,000 of the original Cobras were ever built, and many enthusiasts wanted to own and drive one of these ultimate sports cars yet could not afford to.

A vital resource for pilots, instructors, and students, from the most trusted source of aeronautic information.
