Increased agricultural productivity is a major stepping stone on the path out of poverty in sub-Saharan Africa and South Asia, but farmers there face tremendous challenges improving production. Poor soil, inefficient water use, and a lack of access to plant

breeding resources, nutritious animal feed, high quality seed, and fuel and electricity-combined with some of the most extreme environmental conditions on Earth-have made yields in crop and animal production far lower in these regions than world averages. *Emerging Technologies to Benefit Farmers in Sub-Saharan Africa and South Asia* identifies sixty emerging technologies with the potential to significantly improve agricultural productivity in sub-Saharan Africa and South Asia. Eighteen technologies are recommended for immediate development or further exploration. Scientists from all backgrounds have an opportunity to become involved in bringing these and other technologies to fruition. The opportunities suggested in this book offer new approaches that can synergize with each other and with many other activities to transform agriculture in sub-Saharan Africa and South Asia.

After two tours as a sniper in Iraq, Tommy Smith has returned to his former life as a cowboy and wilderness guide in California's Sierra Nevada, hoping to reclaim the simplicity of his youth and heal the wounds the world can't see. When, high on a mountain pass, he and his partner find the wrecked plane of a billionaire adventurer who disappeared months earlier, a seemingly innocent act triggers a breathtaking cycle of violence that threatens Tommy's world. Soon he is enmeshed in the struggle between the billionaire's trophy wife and wannabe drug lord son and their allies. Every effort to set things right draws him deeper into a bad situation and closer to needing those deadly skills that he had hoped to leave behind forever. With lean, efficient prose

and dialogue that crackles with repartee, Bart Paul has written a contemporary thriller of steadily mounting suspense and ruthless action. He captures both the beauty of the high mountain wilderness and the laconic rhythms of the outfitters' lives. In Tommy Smith he offers a protagonist whose cool competence, home-grown decency, and clarity of purpose in the face of danger suggest a brotherhood with heroes from the likes of Ernest Hemingway and Cormac McCarthy. Neurodegenerative diseases, including Alzheimer's, Parkinson's, Huntington's, and amyotrophic lateral sclerosis, are the most common pathologies of the central nervous system currently without a cure. They share common molecular and cellular characteristics, including protein misfolding, mitochondrial dysfunction, glutamate toxicity, dysregulation of calcium homeostasis, oxidative stress, inflammation, and ageing, which contribute to neuronal death. Efforts to treat these diseases are often limited by their multifactorial etiology. Natural products, thanks to their multitarget

activities, are considered promising alternatives for the treatment of neurodegeneration. This book deals with two different forms of natural products: extracts and isolated compounds. The study of the bioactivity of the extracts is extremely important as many studies have demonstrated the synergistic effect of the combination of different natural products. On the other hand, the investigation of the activity of specifically isolated natural products can be also important to understand their cellular and molecular mechanisms and to define the specific bioactive components in extracts or foods. This book can be considered an important contribution to knowledge of the neuroprotective effect of natural products and presents a great deal of information, related to both the benefits but also the limitations of their use in counteracting neurodegeneration.

Michael Dobkowski and Isidor Walliman have edited a book that, although ominous, is not a fatalistic look at the future. *The Coming Age of Scarcity* lays out the perils of not recognizing the reality of genocide or of acknowledging the full implications of warfare. Showing how scarcity and surplus populations can lead to disaster, *The Coming Age of Scarcity* is about evil. It tells of "ethnic cleansing" and excavates the world's expanding killing fields. The writers in this volume are all too aware that the future suggests that present-day population growth, land resources, energy consumption, and per capita consumption cannot be sustained without leading to greater catastrophes. The essays in this volume ask: What is the solution in the face of mass death and genocide? As philosopher John K. Roth says in the Foreword, "The essays can sensitize us against despair and indifference because history shows that human-made mass death and genocide are not inevitable, and no events related to them will ever be."

For men, and the women who love them, this is a highly controversial book on how to get - and be - a good husband. This book will appeal to the countless women who resent that their husbands never listen and that they have to nag in order to get them to do anything around the house; who feel like their husbands are always pawing at them to have sex; and who want more from their marriage. It will appeal to men who want to have more sex, less nagging, and wives who adore them. In short, GOOD HUSBAND, GREAT MARRIAGE is the book for everyone. GOOD HUSBAND, GREAT MARRIAGE is a hard-hitting, no-nonsense guidebook for men and women to help them fix their marriages. Robert Alter's central, controversial argument: the man is primarily responsible for the marital problems. Alter says to women: "You are right to want what you want from him." He says to men: "Stop thinking it's your wife's fault, and transform yourself into the good husband you know you have in you. " In 50 chapters, Alter describes the problem areas men face and what actions they can take to fix them. The chapters include: "How to Know When You're Being a Man as Opposed to When You're Being an Asshole," "How to Talk to Her," and "Your Anger: Cut the Shit." Alter's approach is

straightforward and logical; he speaks to men in a language they understand. In addition, sections of the book will be geared for women where Alter will give advice to women on what they can do.

"A real jewel of science history...brims with suspense and now-forgotten catastrophe and intrigue...Wadman's smooth prose calmly spins a surpassingly complicated story into a real tour de force."—The New York Times "Riveting . . . [The Vaccine Race] invites comparison with Rebecca Skloot's 2007 *The Immortal Life of Henrietta Lacks*."—Nature The epic and controversial story of a major breakthrough in cell biology that led to the conquest of rubella and other devastating diseases. Until the late 1960s, tens of thousands of American children suffered crippling birth defects if their mothers had been exposed to rubella, popularly known as German measles, while pregnant; there was no vaccine and little understanding of how the disease devastated fetuses. In June 1962, a young biologist in Philadelphia, using tissue extracted from an aborted fetus from Sweden, produced safe, clean cells that allowed the creation of vaccines against rubella and other common childhood diseases. Two years later, in the midst of a devastating German measles epidemic, his colleague developed the vaccine that would one day wipe out homegrown rubella. The rubella vaccine and others made with those fetal cells have protected more than 150 million people in the United States, the vast majority of them preschoolers. The new cells and the method of making them also led to vaccines that have protected billions of people around the world from polio, rabies, chicken pox, measles, hepatitis A, shingles and adenovirus. Meredith Wadman's masterful account recovers not only the science of this urgent race, but also the political roadblocks that nearly stopped the scientists. She describes the terrible dilemmas of pregnant women exposed to

German measles and recounts testing on infants, prisoners, orphans, and the intellectually disabled, which was common in the era. These events take place at the dawn of the battle over using human fetal tissue in research, during the arrival of big commerce in campus labs, and as huge changes take place in the laws and practices governing who “owns” research cells and the profits made from biological inventions. It is also the story of yet one more unrecognized woman whose cells have been used to save countless lives. With another frightening virus--measles--on the rise today, no medical story could have more human drama, impact, or urgency than *The Vaccine Race*.

A week is a long time in politics, but six days can destroy democracy... It should be the

happiest days for former special forces agent Drew Connor. Out walking in New Hampshire's White Mountains with his girlfriend Sheila Cass, he has butterflies in his stomach and an engagement ring in his pocket. Then a thunderstorm hits, and they take shelter in what Sheila thinks is a relay station for a state utility. But when Drew enters the building, he realizes they have stepped into something far more sinister. Bullet-proof checkpoints. Telephone hotlines. A sign by a map that reads INTERNMENT CENTERS. And on a whiteboard a large, handwritten message: CASE SHILOH: ON 9/19 WE TAKE HER BACK! Drew's instinct is to get Sheila out as quickly as possible, and when they stop at a general store, and the police open fire without asking questions, his worst fears are confirmed. Someone wants them dead for what they have seen. And as Drew and Sheila discover, they have stumbled on a plot to kill the president and overthrow the American government, a plan that is to take place in just six days time. With the conspirators claiming they are terrorists on the run, Drew knows it is going to be hard enough just to stay alive, let alone put a stop to this most deadly of political schemes...
