One of the major breakthroughs of the last decade in the understanding of energy homeostasis is the identification of a reciprocal control between circadian rhythmicity and cellular metabolism. Circadian rhythmicity is a fundamental endogenous process of almost every organism living on Earth. For instance, the alternation of hunger and satiety is not continuous over 24 h, but is instead structured in time along the light/dark cycle. In mammals, the temporal organization of metabolism, physiology and behavior around 24 h is controlled by a network of multiple cellular clocks, synchronized via neuronal and hormonal signals by a master clock located in the suprachiasmatic nuclei of the hypothalamus. This central circadian conductor in the brain is mainly reset by ambient light perceived by the retina, while secondary circadian clocks in other brain areas and peripheral organs can be reset by meal timing. Chronic disruption of circadian rhythms, as seen in human shift-workers (up to 20% of the active population), has been associated with the development of a number of adverse mental and metabolic conditions. Understanding of the functional links between circadian desynchronization and overall health in animal models and humans, however, is still scarce. Interactions between circadian clocks and metabolism can occur at different levels: the molecular clockwork, internal synchronization via neuro-hormonal signals, or external synchronization via photic or feeding cues. This Research Topic comprises a number of reviews as well as research and methods articles that feature recent advancements in the mechanisms linking circadian clocks with energy metabolism, and the pathophysiological implications of these interactions for metabolic health.

With the progressive digitisation of the book production processes, we see the emergence of a potentially potent mix of new technologies. Not potent because these technologies are capable of driving change alones, but potent for the commercial and cultural drivers which may work in concert with new technologies to transform the world of books and reading. Central to these technological developments is the convergence of the technologies of etext and digital print. This book examines recent technological changes in book production. Our focus is in part on technological actuality, centred mostly on the digitisation of text and its consequences. Our focus is also on the realm of possibility. Where might these technological shifts lead us? What are the commercial and cultural conditions under which technological possibility might bear fruits? Within this volume we look specifically at the changing definition of a 'book'. A book is no longer a tangible thing; a book is what a book does. It is information architecture. We examine the various manifestations of electronic book readers and imminent technologies, such as electronic ink, including case study on the use of ebook reading devices by a lending library, and speculate about other uses of such devices. We see the convergence of print and etext - manifestations of the same thing - electronically stored text, with the difference demonstrated only in the shift in mindset necessary to accommodate emergent forms of digital text - as information services within a product-service system, the changing shape of digital design and changes in printing technologies from letterpress to the rise of digital printing.

Nearly every business depends on its network to provide information services to carry out essential activities, and network intrusion attacks have been growing increasingly frequent and severe. When network intrusions do occur, it's imperative that a thorough and systematic analysis and investigation of the attack is conducted to determine the nature of the threat and the extent of information lost, stolen, or damaged during the attack. A thorough and timely investigation and response can serve to minimize network downtime and ensure that critical business systems are maintained in full operation. Network Intrusion Analysis teaches the reader about the various tools and techniques to use

during a network intrusion investigation. The book focuses on the methodology of an attack as well as the investigative methodology, challenges, and concerns. This is the first book that provides such a thorough analysis of network intrusion investigation and response. Network Intrusion Analysis addresses the entire process of investigating a network intrusion by: *Providing a step-by-step guide to the tools and techniques used in the analysis and investigation of a network intrusion. *Providing real-world examples of *network intrusions, along with associated workarounds. *Walking you through the methodology and practical steps needed to conduct a thorough intrusion investigation and incident response, including a wealth of practical, hands-on tools for incident assessment and mitigation. S'il existe depuis près de trente ans, ce n'est que récemment, et grâce aux évolutions technologiques notamment (miniaturisation, baisse des prix, apparition des smartphones et tablettes...), que le monde de la domotique est devenu accessible au plus grand nombre – tant dans son coût que dans son installation. LE GUIDE DE RÉFÉRENCE DE LA MAISON CONNECTÉE Que vous habitiez dans un appartement ou une maison, des dizaines d'objets connectés se proposent aujourd'hui d'entrer dans vos foyers pour faciliter vos tâches du quotidien : un thermostat intelligent augmentera ou baissera la température en fonction de vos allées et venues, des automatismes permettront de fermer votre store automatiquement à une certaine heure, un robot pourra tondre la pelouse ou passer l'aspirateur, des ampoules connectées, commandées par votre smartphone, changeront la couleur des lumières de votre salon, ou encore simuleront une présence pour dissuader les cambrioleurs... Tout ceci n'est pas de la science-fiction, le matériel existe bel et bien à des prix abordables, et surtout, il est simple d'installation et d'utilisation. Pourquoi parler d'objets connectés et de domotique dans un même ouvrage ? La raison est simple : la domotique est l'ensemble des objets connectés rendant la maison elle-même connectée, ou communicante. On parle même parfois de maison intelligente, ces différents objets connectés permettant à la maison de réagir automatiquement en fonction d'événements (fermer les volets en cas tempête, passer en mode éco du chauffage lors d'une absence imprévue...). L'objectif de cet ouvrage, illustré et pratique, est de faire le point sur ce que propose aujourd'hui le marché en termes de domotique et d'objets connectés. Il vous accompagnera dans le choix d'une solution adaptée à vos besoins et vous permettra de combiner économies d'énergies, confort et sécurité. Issu d'une formation financière, Cédric Locqueneux a été contrôleur de gestion, puis responsable informatique pendant huit ans. Passionné de nouvelles technologies, il a lancé un blog sur la domotique alors qu'il construisait sa propre maison, il y a huit ans. Son blog (www.maison-et-domotique.com) est devenu un webzine de référence dans le domaine, avec plus de 300 000 visiteurs uniques et plus d'un million de pages vues chaque mois. Cédric Locqueneux est également aujourd'hui l'un des administrateurs de la Fédération française de domotique, et travaille chez Domadoo, une société revendant de l'équipement domotique. À qui s'adresse cet ouvrage ? Au grand public qui souhaite rendre sa maison ou son appartement « intelligent » À celles et ceux qui veulent simplement améliorer la sécurité de leur logement À celles et ceux qui désirent gagner en confort, pour eux ou leurs proches Et enfin à tous ceux qui souhaitent réaliser des économies grâce à la domotique

The author examines the factors which influence terrorists' target selection. In particular he looks at the influence of the ideologies, strategies and tactics of terrorist groups, and describes how these are restricted by the terrorists' resources, by protective and anti-terrorist measures, by the society within which the terrorists operate, and by the nature of the terrorists and their supporters. He concludes that terrorists' target selection is often both explicable and logical.
