Researching Operations Management fills the growing need for a comprehensive textbook and reference on doing quality research in the field of Operations Management (OM). It addresses the particular problem—especially for advanced students and beginning researchers—that many academic departments specialize in just one or a few approaches to research. As a result many students and researchers are not exposed to the breadth of possible research approaches in OM. Providing a concise overview of each of the most important research approaches in the field, the book enables researchers and students to understand and practice these methods, thus giving them a platform for choosing appropriate and complementary approaches to their research. With contributions from an international group of leading thinkers in the OM research field, the book covers those methods frequently used in studies of OM as well as adjacent applied management areas such as management of innovation and R&D, logistics, and supply chain management. Included are chapters on surveys, case studies, action research, longitudinal field studies, and models and simulations together with chapters on planning, positioning, assessing, and publishing research. In addition, the contributors also consider ethical and cultural issues in researching operations management.

Master modern web and network data modeling: both theory and applications. In *Web and Network Data Science*, a top faculty member of Northwestern University's prestigious analytics program presents the first fully-integrated treatment of both the business and academic elements of web and network modeling for predictive analytics. Some books in this field focus either entirely on business issues (e.g., Google Analytics and SEO); others are strictly academic (covering topics such as sociology, complexity theory, ecology, applied physics, and economics). This text gives today's managers and students what they really need: integrated coverage of concepts, principles, and theory in the context of real-world applications. Building on his pioneering Web Analytics course at Northwestern University, Thomas W. Miller covers usability testing, Web site performance, usage analysis, social media platforms, search engine optimization (SEO), and many other topics. He balances this practical coverage with accessible and up-to-date introductions to both social network analysis and network science, demonstrating how these disciplines can be used to solve real business problems.

If you're teaching an introductory science education course in a college or university, *Readings in Science Methods, K - 8*, with its blend of theory, research, and examples of best practices, can serve as your only text, your primary text, or a supplemental text. If you're a preservice teacher, you'll want a copy for its insights into how you can effectively teach science. If you're a practicing teacher, this book will refresh what you already know, and could lead you into new and fruitful approaches. and if you're an administrator, this is the perfect professional development tool as a reference for your staff. The book is a generously sized compendium of articles drawn from NSTA's middle and elementary level journals *Science Scope* and *Science and Children*. Editor Eric Brunzell teaches his methods courses using only the articles, the "voice of the classroom teacher," he says. Brunzell has chosen the best journal articles, tested each in the classroom, and organized them into seven sections, each supplemented with its own insightful introduction and "action steps:" *The Nature of Science and Science Inquiry: Teaching Science; Science for All; Science-Teaching Toolbox; Teaching Life and Environmental Science; Teaching Physical Science; and Teaching Earth and Space Science.*

The overall aim of the book is to introduce students to the typical course followed by a data analysis project in earth sciences. A project usually involves searching relevant literature, reviewing and ranking published books and journal articles, extracting relevant information from the literature in the form of text, data, or graphs, searching and processing the relevant original data using MATLAB, and compiling and presenting the results as posters, abstracts, and oral presentations using graphics design software. The text of this book includes numerous examples on the use of internet resources, on the visualization of data with MATLAB, and on preparing scientific presentations. As with its sister book *MATLAB Recipes for Earth Sciences—3rd Edition (2010)*, which demonstrates the use of statistical and numerical methods on earth science data, this book uses state-of-the art software packages, including MATLAB and the Adobe Creative Suite, to process and present geoscientific information collected during the course of an earth science project. The book's supplementary electronic material (available online through the publisher's website) includes color versions of all figures, recipes with all the MATLAB commands featured in the book, the example data, exported MATLAB graphics, and screenshots of the most important steps involved in processing the graphics.

A vital and underappreciated dimension of social interaction is the way individuals justify their actions to others, instinctively drawing on their experience to appeal to principles they hope will command respect. Individuals, however, often misread situations, and many disagreements can be explained by people appealing, knowingly and unknowingly, to different principles. *On Justification* is the first English translation of Luc Boltanski and Laurent Thévenot's ambitious theoretical examination of these phenomena, a book that has already had a huge impact on French sociology and is likely to have a similar influence in the English-speaking world. In this foundational work of post-Bourdieu sociology, the authors examine a wide range of situations where people justify their actions. The authors argue that justifications fall into six main logics exemplified by six authors: civic (Rousseau), market (Adam Smith), industrial (Saint-Simon), domestic (Bossuet), inspiration (Augustine), and fame (Hobbes). The authors show how these justifications conflict, as people compete to legitimize their views of a situation. *On Justification* is likely to spark important debates across the social sciences.
