The hidden brain is the voice in our ear when we make the most important decisions in our lives—but we're never aware of it. The hidden brain decides whom we fall in love with and whom we hate. It tells us to vote for the white candidate and convict the dark-skinned defendant, to hire the thin woman but pay her less than the man doing the same job. It can direct us to safety when disaster strikes and move us to extraordinary acts of altruism. But it can also be manipulated to turn an ordinary person into a suicide terrorist or a group of bystanders into a mob. In a series of compulsively readable narratives, Shankar Vedantam journeys through the latest discoveries in neuroscience, psychology, and behavioral science to uncover the darkest corner of our minds and its decisive impact on the choices we make as individuals and as a society. Filled with fascinating characters, dramatic storytelling, and cutting-edge science, this is an engrossing exploration of the secrets our brains keep from us—and how they are revealed.

Using Marxist critique, this book explores manifestations of Artificial Intelligence (AI) in Higher Education and demonstrates how it contributes to the functioning and existence of the capitalist university. Challenging the idea that AI is a break from previous capitalist technologies, the book offers nuanced examination of the impacts of AI on the control and regulation of academic work and labour, on digital learning and remote teaching, and on the value of learning and knowledge. Applying a Marxist perspective, Preston argues that commodity fetishism, surveillance, and increasing productivity ushered in by the growth of AI, further alienates and exploits academic labour and commodifies learning and research. The text puts forward a solid theoretical framework and methodology for thinking about AI to inform critical and revolutionary pedagogies. Offering an impactful and timely analysis, this book provides a critical engagement and application of key Marxist concepts in the study of AI's role in Higher Education. It will be of interest to those working or researching in Higher Education.

INSTANT NEW YORK TIMES BESTSELLER An incredible, revolutionary true story and surprisingly simple guide to teaching your dog to talk from speech-language pathologist Christina Hunger, who has taught her dog, Stella, to communicate using simple paw-sized buttons associated with different words. When speech-language pathologist Christina

Hunger first came home with her puppy, Stella, it didn't take long for her to start drawing connections between her job and her new pet. During the day, she worked with toddlers with significant delays in language development and used Augmentative and Alternative Communication (AAC) devices to help them communicate. At night, she wondered: If dogs can understand words we say to them, shouldn't they be able to say words to us? Can dogs use AAC to communicate with humans? Christina decided to put her theory to the test with Stella and started using a paw-sized button programmed with her voice to say the word "outside" when clicked, whenever she took Stella out of the house. A few years later, Stella now has a bank of more than thirty word buttons, and uses them daily either individually or together to create near-complete sentences. *How Stella Learned to Talk* is part memoir and part how-to guide. It chronicles the journey Christina and Stella have taken together, from the day they met, to the day Stella "spoke" her first word, and the other breakthroughs they've had since. It also reveals the techniques Christina used to teach Stella, broken down into simple stages and actionable steps any dog owner can use to start communicating with their pets. Filled with conversations that Stella and Christina have had, as well as the attention to developmental detail that only a speech-language pathologist could know, *How Stella Learned to Talk* will be the indispensable dog book for the new decade.

Daniel Goleman's brilliant report from the frontiers of psychology and neuroscience offers startling new insight into our "two minds"—the rational and the emotional—and how they together shape our destiny. Drawing on groundbreaking brain and behavioral research, Goleman shows the factors at work when people of high IQ flounder and those of modest IQ do surprisingly well. These factors, which include self-awareness, self-discipline, and empathy, add up to a different way of being smart—and they aren't fixed at birth. Although shaped by childhood experiences, emotional intelligence can be nurtured and strengthened throughout our adulthood—with immediate benefits to our health, our relationships, and our work. The twenty-fifth-anniversary edition of Emotional Intelligence could not come at a better time—we spend so much of our time online, more and more jobs are becoming automated and digitized, and our children are picking up new technology faster than we ever imagined. \*Why do seemingly rational, intelligent people commit acts of cruelty and violence? \*What are the root causes of destructive behavior? \*How can we control the emotions that drive these impulses? \*Can we learn to live at peace with ourselves and others? Imagine sitting with the Dalai Lama in his private meeting room with a small group of world-class scientists and philosophers. The talk is lively and fascinating as these leading minds grapple with age-old questions of compelling contemporary urgency. Daniel Goleman, the internationally bestselling author of Emotional Intelligence, provides the illuminating commentary—and reports on the breakthrough research this historic gathering inspired.

Destructive Emotions Buddhist philosophy tells us that all personal unhappiness and interpersonal conflict lie in the “three poisons”: craving, anger, and delusion. It also provides antidotes of astonishing psychological sophistication--which are now being confirmed by modern neuroscience. With new high-tech devices, scientists can peer inside the brain centers that calm the inner storms of rage and fear. They also can demonstrate that awareness-training strategies such as meditation strengthen emotional stability—and greatly enhance our positive moods. The distinguished panel members report these recent findings and debate an exhilarating range of other topics: What role do destructive emotions play in human evolution? Are they “hardwired” in our bodies? Are they universal, or does culture determine how we feel? How can we nurture the compassion that is also our birthright? We learn how practices that reduce negativity have also been shown to bolster the immune system. Here, too, is an enlightened proposal for a school-based program of social and emotional learning that can help our children increase self-awareness, manage their anger, and become more empathetic. Throughout, these provocative ideas are brought to life by the play of personalities, by the Dalai Lama’s probing questions, and by his surprising sense of humor. Although there are no easy answers, the dialogues, which are part of a series sponsored by the Mind and Life Institute, chart an ultimately hopeful course. They are sure to spark discussion among educators, religious and political leaders, parents—and all people who seek peace for themselves and the world. The Mind and Life Institute sponsors cross-cultural dialogues that bring together the Dalai Lama and other Buddhist scholars with Western scientists and philosophers. Mind and Life VIII, on which this book is based, took place in Dharamsala, India, in March 2000.
